## War Traffic Now Crossing!

If you wanted to drive across a river and you found the bridge was already crowded with Army trucks, tanks and guns, you'd cheerfully give them the right of way.

Long Distance telephone lines are bridges of speech, connecting your city with other sections of the land. Today the lines to other states are crowded with military and war production calls.

It's impossible to enlarge the telephone system enough to handle all the increased volume of calls. The materials required for new construction are even more urgently needed

for war production. So we must make the most efficient use of what we have—with the help of every telephone user.

Here are three simple ways in which you can help keep the messages of war moving:

1. Make only the most essential Long Distance calls to Washington, D. C., and other centers of war activity.
2. Keep ALL your telephone conversations as brief as you can.
3. When possible, give the number of the distant telephone you are calling.
