Did you notice in the papers the story that North Shore Gas Company has voted a 20c dividend to be paid stockholders on April 1st?

Newsweek reports that the oil industry hopes to produce 100 Octane Gasoline at the rate of one million barrels a day by the end of the year. This 100 Octane (no knock) Gasoline is essential to our aviation.

One of the bi-products of 100 Octane Gasoline is a low grade 40 Octane Distillate, which is under consideration as a substitute for fuel oil in our Gas plants. The distillate will make good fuel gas but the costs are higher than our present oils. It may become necessary to use this distillate in spite of higher costs in order to save fuel oils for our Navy.

To conserve manpower and help meet increasing expenses we expect to follow the lead of neighboring utilities and read meters bi-monthly. Bills will be sent out monthly, but alternate bills will be "averaged", or based on your previous use. Of course, the actual reading in the following month will correct for any differences between estimated and actual use. We shall appreciate your cooperation, for the duration.
