MAN LOOKING FOR TROUBLE

With the central office testman on the job, trouble on your telephone line doesn't get a chance to last very long.

At his special switchboard, called a test desk, the testman keeps an eye on every customer's line. Using precision devices, he can spot a flaw or weakness on your line and often can have it corrected before you're aware of it. This checking and repairing is what telephone men call "preventive maintenance."

Looking for trouble before it happens has paid off. In 1926 a telephone was reported "in trouble" once every five months, on the average. Now the average is only once every two years.

With experts and instruments like these, Illinois Bell is keeping your telephone service dependable and trying always to make it more valuable to you.
