HYDRO LAMPS

SPEED PRODUCTION

F factory production falls below normal when the sun goes down and the lights go on, the fault most likely is with the lighting system. You may give your working people enough light but it may not be the right quality.

HYDRO Lamps are comfortable for workers' eyes. They contribute towards better working conditions.

HYDRO Cas Filled Lumps not only give a great volume of light, but their rays are of a quality that prolongs the day artificially-from sunset to sunrise if you wish. In spite of their greater brilliancy and better quality of light, Hydro Gas Filled Lamps consume but little current. Long life and freedom from mechanical defects are assured by the Hydro-Electric Power Commission of Ontario through tests made in the Commission's laboratories. Owner, manager, superintendent of factory or any person

responsible for production is urged to investigate the merits of HYDRO Gas Filled Lamps. Arrange with the Hydro Shop for a convincing demonstration at our expense. HYDRO-ELECTRIC POWER COMMISSION
