AN WATER IN FARM HOMES

Compression System Will Give General Satisfaction.

Water Pumped Into a Metal Tank Against Compressed Air-Various Methods of Working the Pump-Air Valves a Necessity - Seven Steps to Success In Poultry

(Contributed by Ontario Department of Agriculture, Toronto.)

In my last article I described briefly the attic tank system of water supply for the fural home. This system has given very good satisfaction in the past, but I doubt if it will be installed in many homes in the future, as there is now on the market something very much superior in many respects. I refer to the compression water system, which will try to describe in a few words.

How the System Operates. The chief feature of this system is hat water is pumped into a strong air-tight cylindrical metal tank against the entrapped air which is compressed in the upper portion of a pressure varying from 40 to 45 lbs. Greater pressure, if required, may a higher level than named in the

broken rock, but indications are that tank is a pressure gauge. The tank a cement culvert may be found neces must be kept in a frost-proof placesay the celiar, or an underground pit. The water keeps cool, clean and fresh

the tank: By hand, by windmill, by Despondency, Loss of Energy, Palpitation of gasoline engine, or by electric motor. intentioned bursts of enthusiasm will the Heart, Failing Memory. Price \$1 per box, six A few minutes of pumping each day by hand will keep the ordinary-sized house supplied with plenty of water. When the pump can be operated by windmill or electric motor, there is the great advantage of automatic starting and stopping of the pump. Every forest fire destroys game and The automatic electric water systems That was the case in "A Bill of game cover. Less game means less of the present day are very convenient and also very efficient. In case side the house or barns. As farmers

to arise and cheer for ten minutes. Small fires are more comfortable There are several styles or designs. attention and are very noiseless will give good satisfaction if the in-

Air Valves a Necessity.

Pumps used in connection with compression systems must be provided with an air valve for renewing the air in the tank because the air dissolves in the water and escapes with it. If means for pumping in air were not provided for, the tank would eventually become waterlogged and the system would be rendered absolutely useless.

The compression water system is described and illustrated in Bulletin E. Pinkham's Vege- 267, entitled "Farm Water Supply and Sewage Disposal." A copy may be secured without cost by dropping a line to the Department of Physics, O. A. ., Guelph, Ont. Give us a chance to help you to solve your water supply problem.-R. R. Graham, O. A.

Seven Steps to Success In Poultry 1. Keep accurate records. Little

progress can be made without this 2. Feed a properly balanced ration. Such a ration furnishes nutrients for growth, maintenance, fatten-

3. Give proper care and comfort and dampness, and diseases and

4. Keep standard-bred, utility stock. There are five good breeds for the farm: Plymouth Rock, Rhode Island Red, Leghorn, Wyandotte and Orpington. Varieties of these have been bred for heavy egg-production. 5. Breed from the best, both male and female.

6. Sell unprofitable stock .. Market graded products. Maximum returns are secured from gradmunity co-operation.

The Standard of Comparison

For years McLaughlin - Buick Model 45 five passenger touring car has been the standard by which open cars have been judged.

It possesses in the highest degree those qualities of graceful strength and refinement that suggest at once dependability, comfort and power.

To-day, McLaughlin-Buick Model 22-45 is repeating in fullest meas. ure the success of other years.
