products to the value of \$146,539,883. After the Fordney U.S. Tariff of 1922 went into effect in the United States we **sold** them only \$51,337,733 worth.

By raising their tariffs the United States farmers have put about \$100,000,000 per annum more into their pockets and the Canadian farmers have lost it.

What is the lesson to the Canadian farmer?

On what terms is the Canadian farmer competing with the farmer of the United States? They are terms that not only forbid the sale of his products in the United States but compel him at the same time to witness United States farm products replacing his own in the home markets of Canada. Let us examine some of these terms.

The United States raised their tariff, in order to protect the American Farmers, and the purchasing of foreign farm products was reduced. It was, therefore, to the American Farmer's benefit.

And we prove it. In the next column we list a few Canadian products imported by the United States under the 1921 tariff and under the raised tariff of September 21st, 1922. These figures are quoted from the "Commercial Intelligence Journal" published by Ottawa Government (26th September, 1925, page 324).

Back in 1921 we sold the United States agricultural Canadian Farm Exports to the United States, 11 months ending August 1921 and 11 months ending August 1925

And now a great reduction has been made by the Canadian-Australian Treaty which just went into effect on October 1st, 1925. Under this treaty Australian (and New Zealand) farm products will enter Canada at the following

Canada will be flooded with farm products from other countries at these low rates, but Canadian farm products are shut out of other countries by high tariffs. Meanwhile half a million Canadians have moved to the United States because of the tariff reductions that have closed up or slowed down hundreds of factories. That is, half a million buyers of Canadian farm products have been lost. The farmers are hit twice.
