Is Your Soll Acid or Sour? If So , Lime Will Help-Anyway the Subject Is Worth Your Study.

(Contributed by Ontario Department of Agriculture, Toronto.)

What is soil acidity? When we speak of a substance behas properties common to all acids.)

Sour Soll. So often we hear the expression i "sour" in speaking of soils. It is generally used to describe a soil which is poorly drained, more or less water- | dangerous. logged and in poor physical condition. It may be acid or it may not, and therefore the term is misleading. There is only one term we can cor rectly use and that is "acid" soil behaves under chemical investigation in a certain way it is acid.) So we will drop the term "sour" when speaking of soils.

How Soils Become Acid. togother.

Decaying Organic Matter. matter is largely found in peaty soils which are not affected by washings their mother to the depths of the from surrounding high land. We find pool.

this condition of affairs in Northern Ontario muskegs, where the sub-soils which normally might contain lime are buried deeply under a soil composed entirely of decayed plant mat-High Lands and Acidity.

High lands tend to bycome acid first. This idea is new or comparatively so and contrary to the belief of many. It has been generally understood that low lying land is gencrally acid but how the opposite has | tained. been proven. Let us see how this is. In a climate like ours we get about 30 inches of rainfall in a year. As this rain falls on the soil it soaks in So we ik is this acid that we cannot ac p. by very delicate tests the roll, and though it is very slow in action, within a hundred years it
