MOST OUT OF MAN. Next to Rowing-Termis Is Not

In the course of an article on the heart we suggested that if there was usual strain upon the heart, writes J. V. McAree in the Toronto Mail and Empire. Our illustration might have been happier, we infer from an article upon sports in the Outlook by George Trevor. He writes: "Long-distance running is not as gruelling an ordeal as the uninitiated imagine.

dog trot, once those organs have adapted themselves to a sustained jog. Marathon running is a game for age as well as youth. Clarence De Mar still wins marathons though be is nearly 50. Harry Parkinson, rejected by course stewards because of a flighty heart, enters the Boston marathon without official sanction and always finishes." We quote this not as evidence against the expert consensus that there is no such thing as athlete's heart, but merely as an interesting illustration of what various athletic sports demand of their What is the most strenuous form

competitive athletics? asks Mr.

are unaffected by the monotonous

Trevor. He says that the toughest game of all is four-mile rowing. The oarsman who pulls a sweep in a fourmile race makes the supreme demand on nature. He requires a longer period of preparation. An athlete physically fit to box, play football, or run a mile, would not be able to undergo the long-drawn-out torture of a fourmile row unless he had been specially prepared for it. "Surprising as it may seem to the layman," says Mr. Trevor, "rowing puts relatively slight stress upon the arms. It is the legs, abdominal muscles and heart that are taxed unmercifully. The nervous tension, the feeling of personal responsibility, preceding a race, puts an Several bird fithers take quite an added burden on the heart. Each oarsman realizes that he is a vital cog in that smooth mechanism we call a crew. There is no substitute ready to leap into the shell at the first hint of weakness." It would seem that rowing is even more trying than sculling and we remember being told by Lou Scholes, when the memory of his struggles at Henley were fresh in his mind, that no money in the world would induce him to repeat the ordeal from the

beginning of training to the finals for the Diamond Sculls. Canadians will be interested to know that Major Frank Wandle, for ten years athletic director and football trainer of the U.S. Military Academy, places lacrosse as the most' strenuous of all sports next to rowing. The field players are compelled to race up and down the field as long as the game lasts with hardly a letup. As an example of what lacrosse takes out of a man he cites the case of Holley, Army centre, who entered a game with Navy weighing 145 pounds, and when the game was over weighed 132. It must be remembered also that Holley was in first class physical condition when the game began. Another Canadan game, hockey, comes next. Hockey and lacrosse are undoubtedly the two hardest games on the wind, with racquets a step! behind. It is easier to skate than to

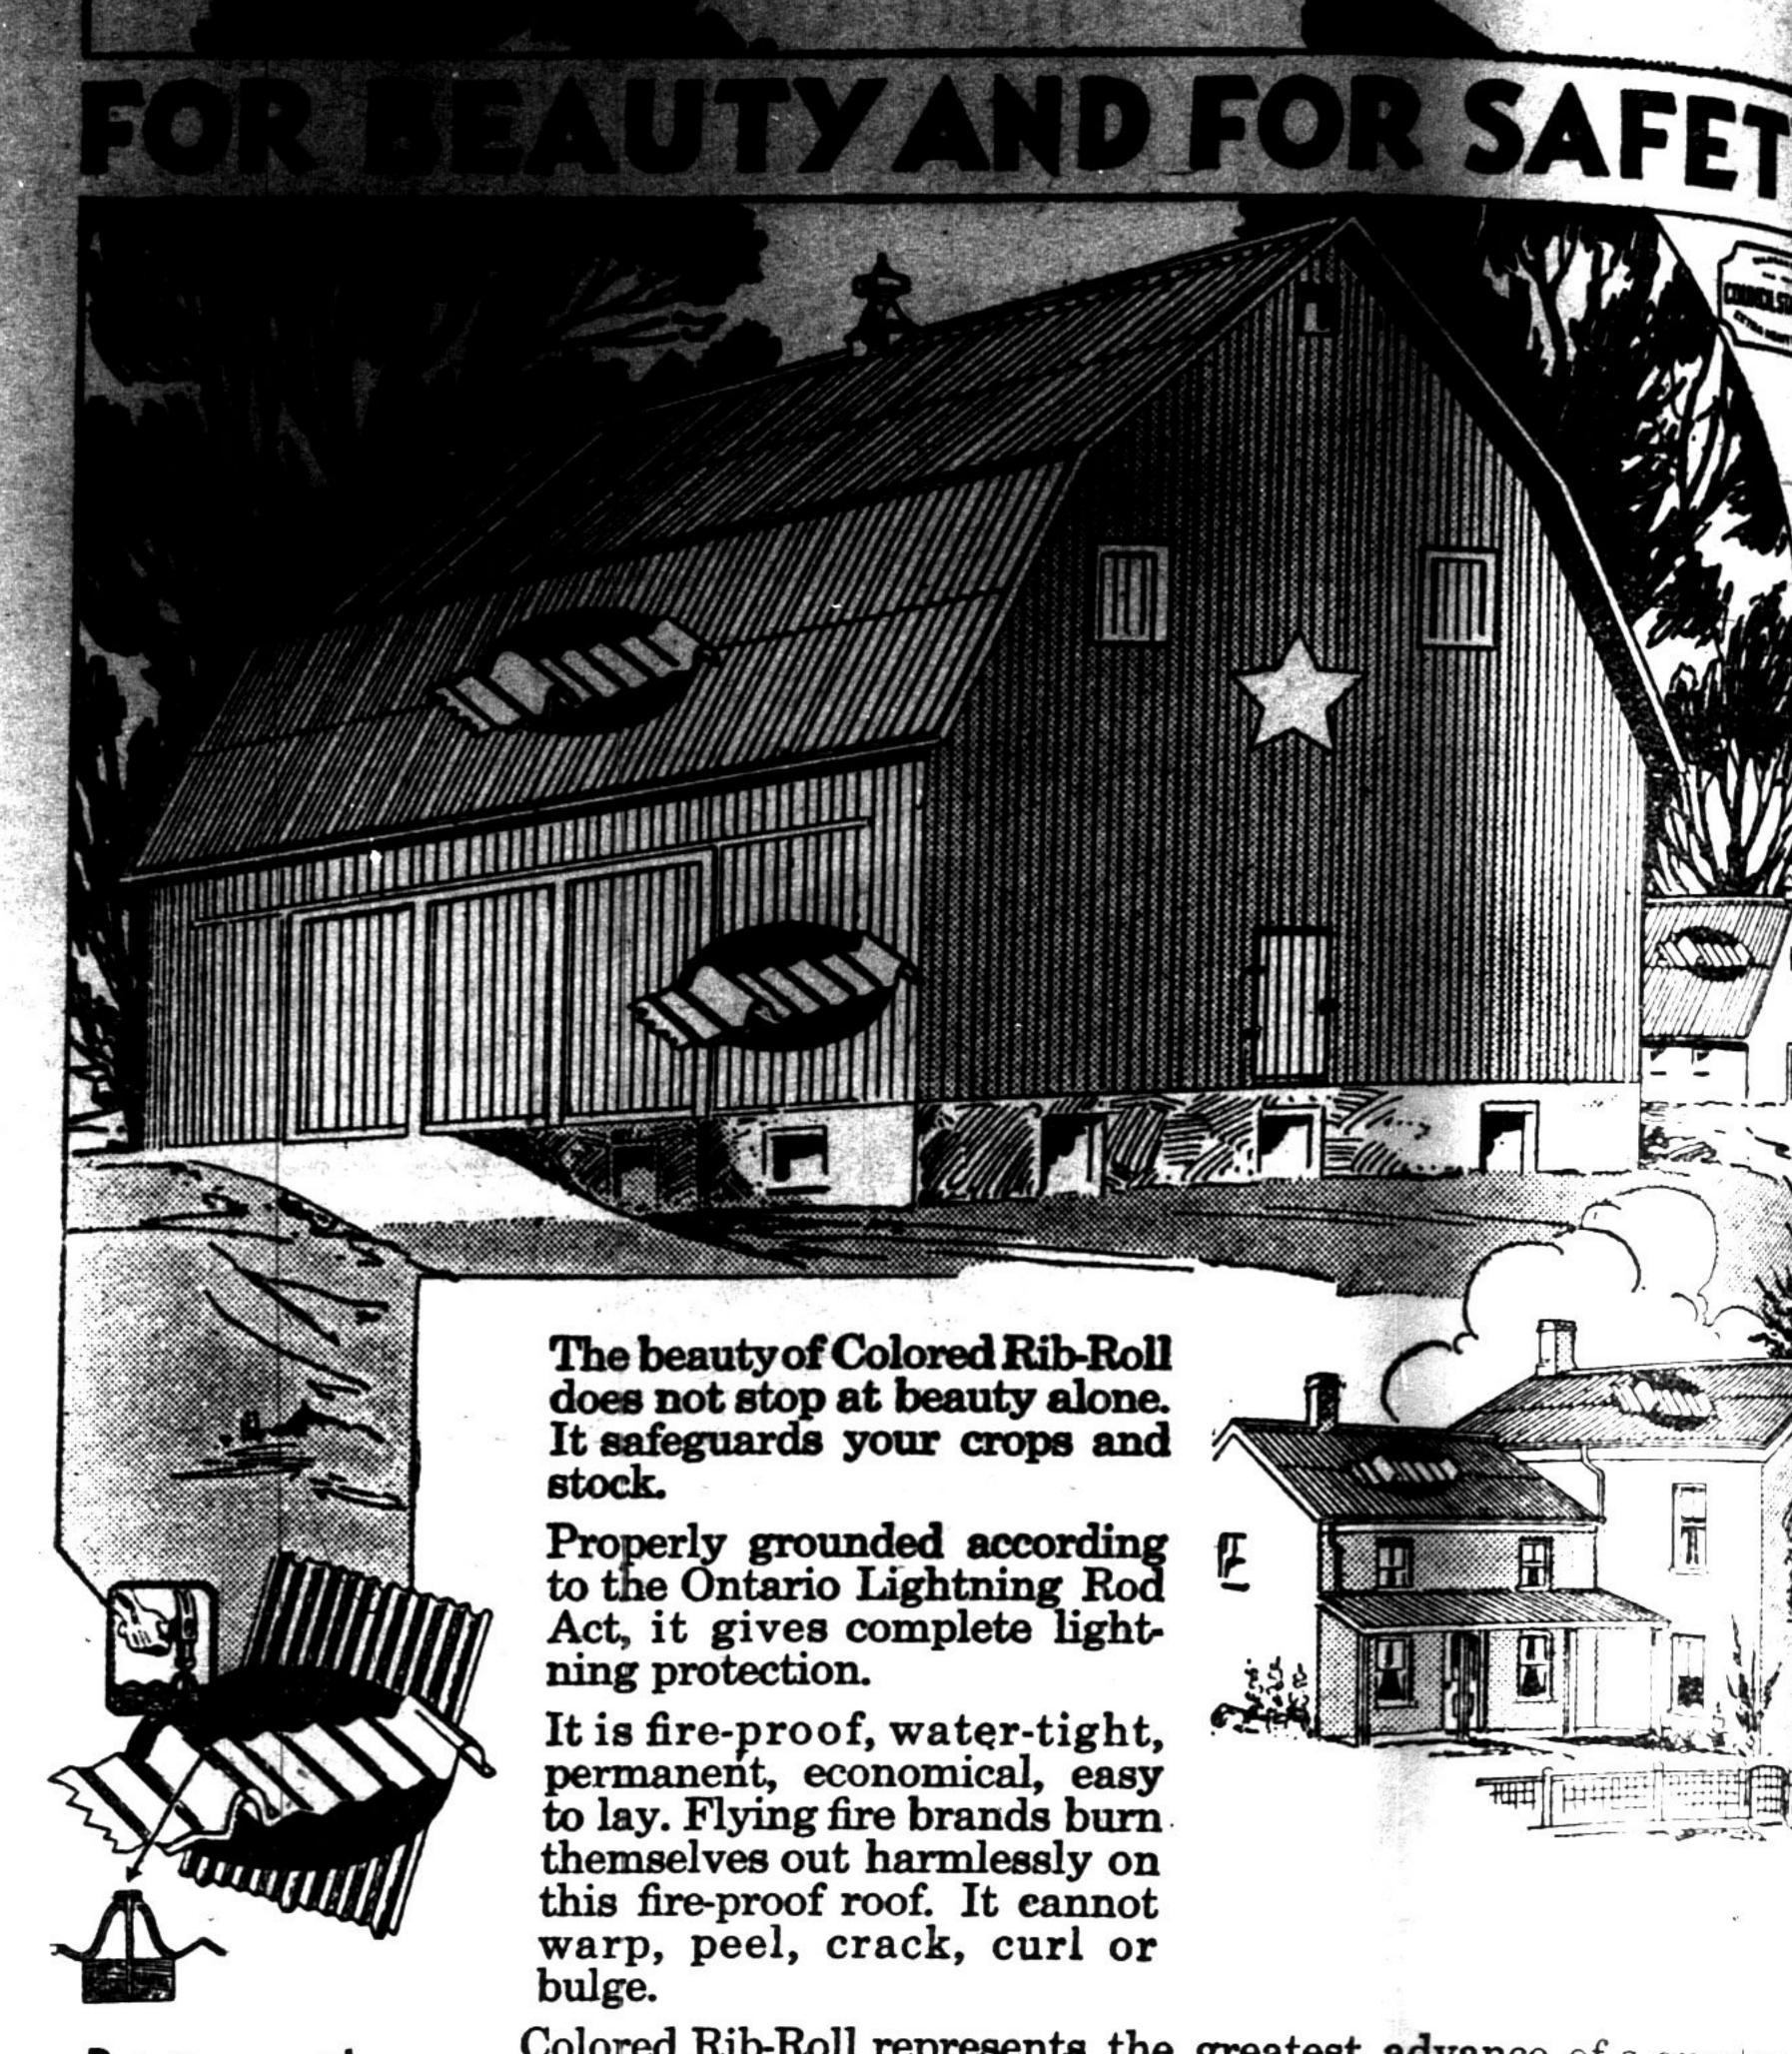

run, but the sudden stops, quick stars and hairpin turns jar the! nerwous system and deplete vitality. The process is furthered by the legitimate body checking which must shock an athlete almost as much as being heavily tackled on a football field. Repeated substitutions bear witness to the killing pace that' hockey players must maintain in first class company to-day.

Basketball is somewhat less exacting. The halves are limited to twenty minutes, the interruptions for foul! shots are frequent and the body checking is less punishing than in hockey. Moreover, the recently developed five-man defence eliminates a lot of running. Tennis, once contemptuously regarded as in the same sporting category as carpet balls and croquet, is in reality one of the hardest games a man can play. At Meled strain of repeated sudden stops At various points one comes across and starts. In running the middle apparatus for measuring, for exam- distances are the hardest, the quarple, the amount of moisture in wool, ter-mile being considered the most the friction between two fabrics, the exhausting since it is a sustained sprint.
