Test Ripeness of Cheese

by Listening to "Tone" Experts in the Parmesan cheese warehouses test the ripeness of their product not by smelling it, but by listening to its "tone," according to a correspondent in the Chicago Daily News. The tone is produced by a little silver hammer, and after cheeses have been in the warehouse at least two years the tester goes about tapping them with the hammer, listening for the ring which assures him that they are ready for market.

cheese is a short process, but its curing long. After the cheese has been formed it is put in a brine this time it is painted with special vegetable oils, which give it a glossy black coating, and then stored with hundreds of others tocomplete its ripening.

Its special flavor is supposed to come from the grass of this region, which is also famous for its violets. Parmesan cheese is popular everywhere in Italy, and American travelers find it sprinkled not only on their spaghetti and macaroni, but but also over soups, vegetables and

"Two Bits"

A Mexican real, a small silver piece, was one of the coins which irculated in this country in colonial days and for a while after the Revoution, Mexico at that time being a Spanish colony. This small coin was also known as a "bit." Because Mexican and Spanish money had a fixed and standard value, which our own money lacked, it was the usual medium of exchange, and was more often seen than British or colonial currency. And because of the familiarity and the convenience of the Spanish dollar and its fractions, we came to use a dollar currency instead of pounds and pence. A real, or "bit," had the face value of oneeighth of a dollar, or 121/2 cents;

Discovered Use of Vinegar

Louis Pasteur made possible the modern methods of vinegar-making. In 1864 he discovered the bacillus which acetifies beer or malt. He soaked birch twigs in sour beer until they were smothered with these bacilli. Then he percolated fresh malt through the twigs until it became acetified. The twigs are built up in criss-cross fashion to a height of about three feet. The percolation goes on for three weeks. London vinegar-makers use some fifteen tons of these twigs a year. Butler declared he would write no more for his contemporaries but would write for posterity only. And sure enough, he was right.
