## Early's Sales & Service

### CARS

1938 Ford DeLuxe Tudor, like new  
1937 Chev. Coupe, good  
1936 Ford Tudor, heater and defroster, etc. in splendid shape  
1926 Ford Tudor with trunk and completely overhauled  
1935 Hudson Sedan, new brakes, tires, etc. real good.  
1931 Ford Cabriolet, new top, rebored, rebuilt throughout  
1929 Ford Roadster  
1931 Willys Sedan, in A1 shape  
2-1929 Ford Tudors  
1929 Essex Sedan  
1929 Pontiac Sedan  
1929 Durant Coupe  
1928 Chrysler Coupe, 4 cyl.

### TRUCKS

1937 Ford Dump Truck, like new  
1937 Chev. Maple Leaf Stake, in good condition  
1935 Ford Stake Truck, long wheel-base  
1932 Chev. heavy duty long truck  
10-29 McCormick Deering Tractor, good  
2-Farrow McCormick Deering Tractor, plows like new  
Fordson Tractor, fenders, pulley, etc. in good shape  
Fordson Tractor, cheap  
John Deere Tractor, handy farm size

Bay Mare, 3 years old, broken to work  
Good Work Mare, 9 years old, dark grey

You cannot beat the prices on these cars and trucks or tractors anywhere. Just let us show them to you.

**CAMPBELLVILLE**

### Halton Garage Operators Meet.

The regular meeting of the Halton Branch of the Ontario Garage Operators' Association was held in the Farmers' Hall at Milton on Thursday evening last, the President, Mr. J. L. McKindley, Burlington, presiding.

The number of members and visitors was not as large as usual. But the enthusiasm was of the same high standard, and what was short in quantity was made up in quality. A large number of items came before the meeting for discussion, and very keen interest was shown by all the members in the manner in which every item was discussed.

It was with regret the Branch accepted the resignation of two of its valued member officers. The genial treasurer, Geo. McLeod, stepped from the ranks of the Branch, and offered himself as No. 1 of the organization and placed himself at the service of our King and Country. The best wishes of the boys of Halton Branch will follow "Mac" and we sincerely hope before long he will again be one of the member officers of the Branch. Ross Maxwell, the vice-president, also stepped from the ranks, Ross having severed his connections with his business in Burlington. It is hoped he will again locate in the county and join the membership. One and all the boys join hands in wishing him every success and the very best of luck.

Following the regular business period the meeting was turned over to representatives of the Imperial Oil Limited—Mr. R. R. Baker, Toronto, district salesman; Mr. J. Q. Shand, fleet consumer salesman, and Mr. R. Y. Cunningham, of the sales promotion staff. The big feature of their programme was motion pictures on the care and maintenance of the engine of a modern automobile. This was one of the best programmes presented to the Branch this season.

A vote of thanks was given to the Imperial Oil Co., Limited, and to their representatives for their efforts in bringing to the Halton Branch such an inspiring and educational programme.

By a motion the meeting then adjourned, and the regular meetings will be discontinued until September. At the close of the meeting the members and friends enjoyed a buffet luncheon provided through the courtesy of the Imperial Oil Companies, Limited.

**'Pill' Used for Testing Metal's Temperature**  
Metallurgists now can take a metal's temperature by giving it a pill.

The new pill method was developed recently by Harry Blumberg, of Jersey City, to extend the range of existing temperature-finding methods to lower temperatures.

The problem which the pills solve is that of indicating the temperature of metals which are too hot to be measured or welded at less than 900 degrees Fahrenheit. Metal heated to 400 degrees, for example, is too cool to show a distinctive color by which higher temperatures can be determined.

Blumberg devised pills made of various compounds which melt at definite temperatures. After much experimentation, he developed a complete set of chemical pellets having sharply defined melting points from 200 to 900 degrees.

Now, when a plant operation is specified for a temperature of 400 degrees, the metal can be heated and a 400-degree pill, colored for identification, dropped on its surface.

**San Quentin 'Rejuvenations'**  
Unknown to the outside world, except in limited medical circles, San Quentin prison in California for the past 22 years has been the world's greatest clinic for rejuvenation experiments, a final report by Dr. Leo L. Stanley, chief prison surgeon, reveals. All of the operations of Werneroff of Paris, Steiner of Vienna, and of other great surgeons and specialists in rejuvenation and the fighting of senility have been duplicated thousands of times as well as entirely new methods worked out by Dr. Stanley himself. In the 22 years, during which Dr. Stanley introduced and applied this system of treatment in the penitentiary, 10,000 such operations have been performed.

**'Bluegrass State' Title**  
Minnesota has laid claim to the title of the "Bluegrass State"—in defiance of Kentucky and all her colonies. Minnesota has the support of A. L. Brandon, of St. Charles, Ill., president of the Golf Course Superintendents' association. After visiting several Minnesota golf courses Brandon said: "Fairway grass is bluegrass, and there is more of it in Minnesota than Kentucky. What is more, Minnesota's bluegrass is a better and sturdier specimen."

The French Government have buyers in Ontario at the present time looking for horses for use overseas. It may be true that "man is made of dust." But surely not all men. Dust settles. The troubles of others are interesting because we like to compare them with our own.

# Clears CLOGGED DRAINS

**BECAUSE** it cuts right through clogging dirt, Gillett's Lye is a boon to the housewife! Keep it handy always—for clearing out drains . . . for scouring pots and pans . . . for many other everyday household tasks!

*"Never dissolve lye in hot water. The action of the lye itself heats the water."*

**FREE BROCHURE**—The Gillett's Lye Book tells how this powerful cleanser clears clogged drains . . . keeps out-bowls clean and odorless by destroying the contents of the bowl . . . how it performs dozens of tasks. Send for a free copy to Brantford Lye Co., Fraser Ave. and Liberty Street, Toronto, Ont.

### Number of U. S. Farms Has Tripled Since 1860

Since 1860 the number of farms in this country has more than tripled. But the size of the average farm has steadily decreased; as population grew, farms were subdivided. In 1860, according to census figures and estimates compiled by the Farm Security administration, about 10 per cent of the country's farms were of less than 20 acres, but today, 18 per cent are of less than 20 acres. In 1880 nearly 30 per cent of the farms were less than 50 acres in size. Today, nearly 40 per cent are less than 50 acres. The problem of the too-small farm has been intensified in recent years. It was less serious as long as the expansion of industry continued to absorb millions of people from farms. But with a shortage of jobs in the cities, beginning with the 1929 depression, too many farm people, who would ordinarily have migrated to urban areas, have had to remain in rural areas.

Meanwhile the productivity of millions of acres of farm land has been impaired by erosion and wasteful farming; drouth has routed many farmers from their land. Areas still being cultivated are too poor to support adequately the present population, much less a growing population. Mechanization has displaced many former hired hands from the rich lands who, if they are going to continue farming, must add to the millions competing for and subdividing the remaining small farms in poorer areas.

### U. S. Volcanic Activity Limited to California

Though there is considerable volcanic activity in Alaska, the United States proper has only one active volcano, and that has been reasonably quiet for most of the last quarter century. At Lassen Volcanic National park, in California, says the National Geographic society, visitors go to see fantastic lava fields, boiling springs, ruined forests and Lassen peak itself, reaching 10,453 feet skyward.

It was in the spring of 1914 that Lassen, after some 200 years of good behavior, began a series of eruptions climaxed in May, 1915. Then a giant mushroom-shaped cloud thrust upward four miles over the volcano and was seen as far away as the Sacramento valley. Fireworks-like flashes illuminated the night, and blasts of hot gasses, pouring out of the mountain, turned snowy slopes into torrential rivers that drowned meadows, split boulders and uprooted trees in miles of devastation. Named for Peter Lassen, one of John C. Fremont's guides in the growing days of the republic, Lassen peak is a "dormant" volcano. Scientists estimate that the next outburst may come about 1980.

### Prize Fish Story

Abner Roe, a prominent Isaac Walton of Washington, D. C., has verification for the prize fish story of the year. Bass casting on the Potomac river, Roe was frequently annoyed because his line was snubbing on subsurface roots and other obstructions. One especially vigorous cast placed the plug close to shore. As Roe attempted to reel in, the line grew taut. He had hooked a redhead duck through the fleshy part of the wing. The bird had been crippled and was unable to fly. Next season, Roe says he's going to take his rod and reel with him when he goes duck hunting. "If I can't shoot 'em, I can hook 'em," he believes.

### Sprinting Pig

Perhaps looking forward to the day when a fleet foot might save him from the slaughterhouse, a baby pig at Wilton, N. H., tries his luck at outdistancing automobiles. The pig races a car going in one direction, but reverses its track when it meets one traveling the other way.

There is no other tobacco JUST LIKE **OLD CHUM**

### Crickets and 'Hoppers

**Thrive on Same Crops**  
Every spring hordes of Mormon crickets and grasshoppers hatch from eggs deposited during the previous summer and autumn, and then begin their destructive attack upon crops and virtually every type of vegetation throughout 24 Western states. The Mormon cricket is a serious pest, however, only in 11 northern Rocky Mountain and Plains states.

These insects are similar in size, go through the same stages of development, and do their damage during the growing season. But entomologists of the federal department of agriculture point out that because of physical differences their methods of attack differ. Mormon crickets are unable to fly. They attack on foot. Most injurious grasshoppers also migrate to some extent on foot but after reaching maturity some species are active fliers and migrate by flight in great swarms, destroying vegetation wherever they alight.

The most effective method of combating Mormon crickets is by dusting the migrating hordes with sodium arsenite. Barriers with pens to trap the crickets are also effective supplementary control. Millions of crickets pile on top of each other in the pens and are killed with a sodium arsenite dust or crude oil solution. Another method, similar in principle, is to dig trenches to trap the crawling cricket army.

Hoppers are controlled by feeding them poison bait. The most effective method is to broadcast a moistened mixture of bran, sawdust and liquid sodium arsenite. Wherever practicable this bait is applied on egg bed areas to poison the young hoppers and thus prevent migration.

Last year the federal government spent approximately \$2,200,000 in controlling grasshoppers. This was supplemented by contributions from co-operating states, estimated at slightly in excess of \$1,300,000. The cost of controlling Mormon crickets during the same year was nearly \$400,000, co-operating states contributing \$201,000. Protection was afforded to 1,375,964 crop acres. Crops on only 12,935 acres were destroyed.

### Killing Bear Was 'Routine' For Early Woman Settler

Examination of early records and photostatic copies of such documents are among the services to posterity carried on by historians of the national park service. One such record concerns the family of an early settler in Yellowstone National park. Its laconic style is as significant of the period as is the thrilling experience related.

"In June, '81, I went to Omaha on business, expected to be gone 30 days; had sufficient grub to last till my return cached away in a root house apart but near my cabin, while I was gone and my wife and four children were necessarily alone.

"Soon after my departure one morning two bears came down the mt., smelling the meat &c. in root house; approached same and went to digging through the dirt roof.

"Wife saw it was either kill bears or starve. She took rifle, shot one bear through the lungs. He came rolling toward her. She ran in cabin and closed door just in time, as bear threw himself against it, shaking the whole house. He found it useless, however, and went off.

Wife followed him up the mt. found him breathing hard, shot him through the heart. Weed 700 lbs. Skin was split when I got home, but wife and babes were safe."

### Wooden Structural Defects

Alternate wet and dry conditions tend to render unsound the structural and other wooden members in a building, point out FHA officials. The ends of joists embedded in a masonry foundation wall may become unsound if the walls of the basement are damp and poorly ventilated. As a result of a leak in the roof or eaves, similar damage to other parts of the building may occur, such as loosened or deteriorated flashing. A simple test will help determine whether structural reinforcements are necessary: the wood may be tested by jabbing it with the point of a penknife. If it is soft and spongy or very brittle it is likely repairs are necessary. Badly deteriorated parts should be replaced and the basement of the building should be kept properly ventilated to prevent further deterioration.

### Disease Catching Ages

The acute communicable diseases have always been a matter of considerable concern to school authorities because of the relatively high incidence of these diseases in children of school age. More than 50 per cent of the reported cases of four of the common communicable diseases—scarlet fever, whooping cough, measles and diphtheria—occur between the ages of 5 and 14 years, writes Dr. Ernest L. Stebbins in the New York State Journal of Medicine. With the tendency toward concentration of educational facilities into larger units, it has been assumed that there has been an increase in the opportunity for exposure to infection. Fortunately, effective control measures have been developed for one of these diseases which in more than offset the greater possibilities of exposure, and there has been a consistent decrease in the incidence and mortality from diphtheria in the school age group as well as in younger children.

# Save up to 20% on Insurance Premiums with Brantford Roofing

In many communities fire insurance premiums are reduced as much as 20% when Brantford Asphalt Slates are used to give added protection from fire. Secure peace of mind as well as lowered costs by specifying Brantford Roofing.

Our experience during thirty-five years of satisfactory service to customers throughout Canada has enabled us to produce products of quality especially designed for Canadian requirements. You can rely upon Brantford Asphalt Roofing to give you long, satisfactory and economical service.

This famous roofing comes in many beautiful colour combinations that will add value and distinction to your home.

Ask your Brantford Roofing dealer to show you some of the many attractive colour combinations.

**"FOR ECONOMY... CONVENIENCE AND SATISFACTION... I ALWAYS USE RAMSAY PAINTS"**

Says: Mr. J. ALEX. CAMERON, Woodbridge, Ont.

"Keeping my farm, home, barns and equipment up-to-date and in condition to withstand the hardest wear, as well as the changing weather, has always been one of my greatest problems; but I solved this problem.

"For my home I use Ramsay's 'Unit-corn' . . . it lasts twice as long. For equipment, I use Ramsay's Wagon and Implement Paint because it stands up under the hardest wear. And for my barn, the envy of my neighbours, I use Ramsay's Barn Paint."

**ABSOLUTELY FREE!**

Write A. Ramsay & Son Company, 6700 Park Ave., Montreal, today for the Paint Book of the year—'Paint Styling with Ramsay Paints'. It's unique and out of the ordinary and will provide interest for all the family. Match your color schemes before you buy paint.
