REASON FOR SACRIFICE

By KARL GRAYSON

(Associated Newspapers—WNU Service.)

ATTORNEY GENERAL CHENEY

was admitted at once to Inspector Piper's office.

His attitude was one of familiarity and confidence; thinly masking knowledge of his own importance.

Inspector Piper rose at sight of his visitor. The inspector's attitude was respectful.

"Good morning, Mr. Cheney. This is rather unusual, isn't it? Frankly, I'm flattered."

Attorney Cheney extended his hand, smiled easily and snapped open a cigarette case, which he offered his host.

"Hello, Piper. I know you're busy; must apologize for dropping in so abruptly. Wanted a word with you about young Noyes."

Piper arched his brows. "Noyes? Victor Noyes? You mean that young nobody we booked last night in connection with the Proctor woman murder?"

"The same. Mind telling me the facts about the case, Inspector?"

Cheney's manner was slightly ingratiating. This was odd. Piper spread his hands in a gesture of resignation.

"On the face of it, it looks dead open and shut. The woman was found dead in her apartment. Shot through the head. Sound of the shot attracted the attention of two men passing through the hall. They crashed open Miss Proctor's door and found her lying on the floor in a pool of blood. Young Noyes was standing over the body with a gun in his hand." Piper shrugged.

"Dead open and shut. The kid was caught in the act of robbing the apartment and, in desperation, killing the woman."

Cheney saw the doubt in the inspector's eyes. He said, "Where's the hitch, Inspector? There's some-

Scientist Claims Real Cure for Common Cold

People who say that the wonders of nature never cease, will find their beliefs confirmed by the recent news that a substance which nature intended for life-giving purposes is now being used by a modern science as a "killer."

This material, known as chlorophyll, and dubbed "life's greatest organic element," is the green coloring matter of leaves and it derives its name from two Greek words: chloron, meaning green, and phylon, meaning leaf. Chlorophyll is universally present in all growing vegetable cells and makes plants green.

Strange as it sounds this same chlorophyll is now being used in the fight against human infection; what is more, according to the recent report of 18 Philadelphia physicians who have been working with this vital substance for some time, it looks as if this coloring matter would be able, at last, to end a disease from which practically no one in the world is immune—the common cold.

Dr. Benjamin Gruskin, director of the department of experimental pathology and oncology at Temple university in Philadelphia, discovered the new and important formula that uses chlorophyll. He explained it to a number of other physicians and together they experimented with 12,000 cases of infection, ranging from common colds to pyorrhea (infection of the gums) and peritonitis (infection of the abdomen). In every one of these cases, after a solution of chlorophyll in salt water had been applied for certain specified periods and in certain ways, there were "encouraging results."

Dr. Gruskin proceeded on the way to his discovery of the good qualities of chlorophyll by studying close the modern fight against infection and the work of the great modern scientists like Koch, Pasteur, Klebs and Loeffler. As a result of their work, the fight against infection has been divided into two parts: 1—antiseptics or the use of a disinfectant to destroy the injurious bacteria by chemical means; and 2—immunization, which means the building up of resistance against infection by stimulating the antitoxins in the body or by neutralizing the poisonous products of the bacteria.

He turned at last and reached the door before turning. Victor was still sitting on the cot, smiling happily. Newspapers whose front pages emblazoned his name were strewn about the floor at his feet. His thoughts fled to the night before. He remembered the agonies of the damned in withholding knowledge of his mad love affair with Grace Proctor from his wife and the prying curiosity of the public. And then again his mind dwelt on Victor Noyes, and for the first time in months his soul was at peace.

Remembers Her Manners, Even While in Swimming

And there was the party on a houseboat anchored in a harbor on the sound. It was a hot July afternoon, and a lot of us were sitting around on deck, and suddenly somebody said, "Look! What on earth are they doing?" and we all looked.

There was a large proud yacht anchored near by and what they were doing was obvious enough—they were lowering a dowager down the side of the yacht into the water. She was a large, proud dowager to match, and she wore a bathing suit and a vast straw hat; and it took two members of the crew to get her down the steps, and in. They launched her finally, however, while we watched fascinated.

Once embarked, she became a swimming hat, with plump white arms. She swam a breast-stroke, small and slow, but steady. Somebody said in a hushed voice, "She seems to be coming over here," and it did indeed begin to look that way, and presently there was no doubt about it. We all flocked to the rail to welcome her, and we all leaned forward. When she was within speaking distance, she paused, and did a kind of dog-paddle to keep herself afloat and said, "Good afternoon. Is Mrs. Weeks on board?"

"No," we said. "No—unfortunately—Mrs. Weeks has gone ashore."

"Ah," said the seagoing dowager with a nod of her hat. "Sorry I've missed her."

At this point she sank a little, but came up again at once, blowing out water. She turned and resumed the small, slow breast-stroke—but for a few strokes only. Then she had a social afterthought, and she paused again, and dog-paddled once more, and added gravely—all of this was grave and courteous, as in a drawing room—"When Mrs. Weeks returns, will you tell her, please, that Mrs. DeCoursey K. Breckinridge CALLED?"

His People's People

The late Douglas Fairbanks said in an interview after a visit to England: "A very smart young Englishman of good family once got engaged to a Chicago girl. He told her about his splendid country home with its 45 gardeners and so forth, and the delighted girl exclaimed: 'O Bill, how lovely! We'll live with your people, of course.' But Bill said: 'No, I don't think so. You see, my people are still living with their people.'"

For Lazy Smokers

Smokers who are too lazy to light their own cigarettes will be pleased to hear they can now pick out a cigarette, already lighted, from a combination box and lighter that is the lever-in-line living room lamp. If you haven't been reading recent electric iron advertisements it is possible you haven't heard of a fast-heating iron which before being used is dialed to give exactly the right amount of heat for the fabric to be ironed. In short, you can place the lever-in-line with the word "lin-cotton," "wool," "silk" or "rayon."

Storing Dishes

The natural way for a right-handed person to wash dishes is from right to left—stacking the dishes on the right, and putting them to drain on the left. So the logical place to store dishes used most often is near the place where they are dried, in this case above the left drainboard. Such dishes include cereal and sauce dishes, cups, saucers, plates and platters. The logical place to store everyday silverware and dishes is in drawers below this drainboard.

Onions Have Garden Flavor

Now the smarting, burning sensation has been completely removed from the onion. It's a brand new dehydrated onion, already chopped and offered in convenient one-ounce cans to catch the fancy of housewives everywhere. Packed in a new concentrated form, it eliminates the work union preparation used to require. These convenient flakes are full of their original, garden fresh flavor and taste. You'll find them ideal for the preparation of onion soups, salads, meats, gravies, and many of your favorite dishes where onions are required. So "We're no more my ladies" for these dehydrated chopped onion flakes are now available at your grocer's.

83 Years in Senate

When Sen. Frederick Hale, Republican, Maine, retired recently, it marked the end of an 83-year record of family service in the senate. Hale's grandfather served in the senate during the Civil War. Hale himself had served 24 years when he quit "to get in some traveling, fishing and hunting."

Rattlesnakes Sensitive

Rattlesnakes are sensitive to sunlight, being fatally injured by relatively brief exposures to full sunlight. Experiments on two Western species show exposure of these snakes to full desert sunlight caused death within from 7 to 10 minutes. Apparently the bodies of these snakes could not endure a temperature of over 115 degrees F.

Mexicans Say They Have Cure for Broken Hearts

At the historic Juarez market where Mexicans shop and where American tourists come to see strange products of Mexico's interior, peddlers and vendors offer herbs from Mexican soil that "will cure anything," even a broken heart.

In the tiny booths grizzled wise men do a thriving business in herbs an charms which they say their ancestors have found effective for centuries.

For a bad cold they offer a remedy the Mexican swears by. It's called yerba de vibora, or snake hair.

A little green herb, it grows in the mountains. Brew a tea of yerba de vibora, mix it with total-potent Mexican alcoholic beverage—and the cold will disappear, the vendors assert.

For rheumatism, huachichile is recommended. Gourd tea is reportedly the best cure for chest ailments and tuberculosis. For a hangover, orange leaves mixed with—you guessed it—sotol, is supposed to be the best cure.

Barbas de elote, cornsilk in English, is widely used in brewing a remedy for kidney ailments.

An herb called ruda is used for the earache. For stomach pains, merchants advise gordolobo (mullein). An herb called colemecca is recommended for the blood.

"Snakeskin—the real thing—is rubbed on leprosy victims. Savilla is supposed to be good for wounds, as is mole root for dandruff. The hair is dyed with the latter preparation, which is made from the organ cactus.

In affairs of love the herb doctors offer many remedies.

Peyote, a cactus seed, will make a boy friend care if worn in a sachet over the heart, vendors say. So will red beans carried in the same place.

A dried humming bird also is recommended as a love charm.

American, Chinese Forests Alike in Pre-Historic Era

The forests of China and America were very much alike in the Miocene epoch of geological time, about 20,000,000 years ago.

Half of the Chinese flora of the time had close relatives in America, and there are still living in America about 40 remote relatives of these ancient plants.

This is revealed in a publication of the National Geographic Society of Washington. Authors are Dr. Ralph W. Chaney, professor of paleontology at the University of California, and Hsen Hsu Hu, director of the Fan Memorial Institute of Biology in Peiping, China.

Dr. Chaney explains that the reason for the similarity of the ancient forests is a common origin.

Plants, he says, originated far to the north, perhaps near the Arctic circle, and migrated southward. Successive changes toward colder climate forced the plants down the continents of Asia and North America from their place of origin to lower latitudes. After they had been separated the forests changed, but striking resemblances remained in the Miocene flora and are still apparent today.

The Chinese and American Miocene period both had relatives of such plants as the walnut, birch, alder, poplar, and mulberry. Fifty of the recorded China flora of the Miocene had close relatives in America in the same period.

The publication describes the only finding of Miocene flora in China on record. It was discovered in 1935 in Shantung province, and Dr. Chaney went to study it in 1937. Dr. Chaney and Hu have collaborated in the study since that time.

New Method of Purifying Oil Exhibited on Coast

A new method of purifying oil in a gasoline motor has been perfected by Judd H. Brubaker of Los Angeles. The device, it is claimed, mixes water with gasoline and feeds it to the motor, resulting in the destruction of the sediments formed by sulphuric acid before they reach the cylinders.

"The process is simple," said Brubaker, "and can be adapted to any motor." The attachment consists of an S-shaped pipe with a bowl fastened to its side like a carburetor float. The bowl is connected to a tank containing water. The water is fed to the motor through a tube in the bowl.

"In the line is a set needle that regulates the flow of water." When the motor is idling the flow of water is stopped, eliminating any chance of rust forming in the cylinders. As the throttle is opened the air current speeds up and draws the water through the tube from the bowl. The water breaks up in the pipe just as the gasoline does and together they go into the combustion chamber where the water is turned to steam, joins the chemical action of the burning fuel, and is taken out through the exhaust."

Crucifixion Date of Christ

At last we know definitely that Christ was crucified on April 7, 30 A. D., A. T. Olmstead, professor of oriental history, University of Chicago, said recently. This would make Him only 30 years old at the time—far off our calendar begins with His birth. But the Savior was not His fortieth because the same new knowledge which has accurately dated the Christian calendar, supposed to begin with the birth of Christ, starts some 15 to 18 years too late. In other words, we are living not in the year of Our Lord 1941, but somewhere around 1959.

For Lazy Smokers

Smokers who are too lazy to light their own cigarettes will be pleased to hear they can now pick out a cigarette, already lighted, from a combination box and lighter that is the lever-in-line living room lamp. If you haven't been reading recent electric iron advertisements it is possible you haven't heard of a fast-heating iron which before being used is dialed to give exactly the right amount of heat for the fabric to be ironed. In short, you can place the lever-in-line with the word "lin-cotton," "wool," "silk" or "rayon."

Storing Dishes

The natural way for a right-handed person to wash dishes is from right to left—stacking the dishes on the right, and putting them to drain on the left. So the logical place to store dishes used most often is near the place where they are dried, in this case above the left drainboard. Such dishes include cereal and sauce dishes, cups, saucers, plates and platters. The logical place to store everyday silverware and dishes is in drawers below this drainboard.

Onions Have Garden Flavor

Now the smarting, burning sensation has been completely removed from the onion. It's a brand new dehydrated onion, already chopped and offered in convenient one-ounce cans to catch the fancy of housewives everywhere. Packed in a new concentrated form, it eliminates the work union preparation used to require. These convenient flakes are full of their original, garden fresh flavor and taste. You'll find them ideal for the preparation of onion soups, salads, meats, gravies, and many of your favorite dishes where onions are required. TELEPHONE TIPS FROM A FIGHTER PILOT

A fighter pilot must keep 48 basic factors in mind. These are technical flying matters, apart from battle tactics. And he must also remember other things—for instance how to talk on his aircraft telephone; he always speaks clearly and concisely.

With telephone lines carrying an extra heavy load directly concerned with Canada's war effort, you can help telephone workers maintain good service by adopting fighter pilot telephone technique. When your telephone rings, answer promptly, and don't waste time by saying "hello"—instead give your name immediately. Speak distinctly, directly into the mouthpiece, and be sure to replace the receiver on the hook when you have finished your conversation.

Your co-operation will help us to provide fast, accurate telephone service for a nation at war.
