#### Head of Canadian Corps In Britain Discuss Their Problems With Editors

This is the eleventh in the series of articles written exclusively for the weekly newspapers of Canada by Hugh Templin of the Fergus News-Record. He flew to Great Britain as a guest of the British Council and was given an opportunity to see what is being done in Britain, Ireland and Portugal in wartime.

> are second class troops because they big job to be done. are still in Canada.

The First Division was gathered in almost record time. Basic training of that Division was dropped because fighting was still going on in France. That was a disadvantage which has never been overcome. Word has been passed back to complete all basic training in Canada, including learning of trades. The new Divisions particularly the Third, concentrated on basic training first and now they are learning rapidly in England. training after advanced training has

been completed. New Equipment Perfect

More and more skilled tradesmen are needed by the Army and they cannot be taken out of industry. The trade schools are therefore worth their weight in gold. Repair shops are vitally necessary None of the mechanical equipment was actually defective, but there were some faults having the usual two years of testing. should have them. The manufacturers sent experts over and corrected the faults. The new stuff is exactly as we wish it.

For the past year, Canadian troops have been arriving in Britain fully equipped. Our Air Force, Navy and industrial development have enlarged. General McNaughton would not say how many should go into the Army and how many into industry. We want no flash in the pan We must plan for a war of long duration and not put all our goods in the show window now. No one wants to break up a Division which has been once formed. Someone must decide what is to be our maximum war

The General believed there would have to be an invasion of the Continent. (That was one of the favorite topics for debate in England at that time.) He said there was no doubt about it. A well organized nation cannot be brought to its knees by missles, MAIN ST. and bombs alone. The Air Training Scheme is still Canada's greatest effort, but bombing from the air has its limitations. In a week at the end of | ••••••••••••••••••• the last war over 200,00 tons of missles were used in 2500 yards on the front and more could have been used. Air power cannot drop enough bombs and infantry cannot get there fast enough after the bombs are dropped

to be of the maximum use. One of the editors asked whether he young man with a good education should go into the Air Force rather than the Army. General McNaughton said educated men were needed in all branches of the service. Even if they enlist as privates in the Infantry, they will be found by a card index system and put at the work where they are most needed.

Most Mechanized Army The Canadian Corps has a suffici ent supply of mechanical transport and has two R.C.A.F. squadrons attached to it, which is more than the There are twice as many Engineers as in the last war. There

#### meteorological sections and a thorhave far more mechanization than the British and Engineers to keep

We are now on interior lines with a water barrier and can take the offensive in any direction. An invasion of the Continent is easier than an invasion of England. The Germans may yet attempt an invasion of England and it may be that the best time to strike back will be after that-but not necessarily.

The Germans have 25 times as much coastline to guard as we have, which gives them an impossible task Twelve Canadian editors sat around The Russian campaign has been

a large scale, though some were of were still in retreat. Petrograd was the Continent of Europe.
