noise is deafening, and prevents any lengthy conversation. There is really nothing to do but read, but it did not seem a long time before we were over Newfoundland. This is the real way to see just what the country is 3333333333333333333333333 like, and the plane coming down to about 5,000 feet, we had a fine view T. F. CHISHOLM

of the country, and could really appreciate the amount of water in this Licensed Auctioneer It is a country of inlets, bays, lakes and trees, making a beautiful sight For the County of Halton

from that height. Settlements are Phone 99-r-21 few and far between. Four hours and a half after leaving Rural Route No. 3 MILTON & Montreal, we were gently set down at a huge airport in Newfoundland. 0999999999999999999999 to Eastbound Inn for dinner. GAL.T

Here we were given a pass and taken One interesting thing about Newfoundland is that it seems to be im possible to get anything but tinned The airport is so large that trans-

portation is necessary to around it very much, so that we really did not see much of it. A railway train attracted our tention and the engine carried a mes-Monuments, Markers and sage painted on its sides, "Britain Delivers the Goods."

After a stop of about four hours. the party embarked again, this time with only eleven passengers, as two who left Montreal were bound only for Newfoundland.

We settled as well as we could long tedious night as the steadily forged ahead at a high speed. Looking through the small windows we could see a breathtaking vista of a fleecy floor of clouds brilliantly il. mens with heads that are hard and Insurance and Real Estate | a neecy noor of clouds luminated by the moon.

The longest night comes to an end and soon after a wonderful views of Northern Ireland could obtained through breaks in clouds. The views of the Irish countryside, which looked like an fashioned patchwork quilt will ways remain as one of the most beautiful sights we have ever seen. Soon we approached our destination and the pilot set the huge plane

down with hardly a tremor. Our formalities with the customs and immigration were expedited, and after breakfast that we had enough time to finish, we started on ficient the train journey to London, a jour ney which took longer than the trip from America. Everyone has to look after his own baggage these days on the English railroads, and space the trains is at a premium. The first group of our party were forced to stand up for hours on this long trip, but we were more fortunate in that respect, although we had nothing to

eat until late at night in London. We have described the trip across the Atlantic in some detail, but until after our return to Canada when we can write at leisure, only the outline of our activities will be given.

It had been announced that we would have four days to rest up after our arrival, but we soon wondered just what they meant by "rest." Every moment seemed to be crowded

with some disappointment. Saturday was taken up with registration, and application for ration cards, photos for our passes of which HAIRDRESSING!

Seven of our party Only fully mature specimens, free had left a couple of days before, but from damage caused by insects, disease, rough handling, mechanical inparty up to 13, a fact which did not jury, freezing or chilling should be chosen, advises Dominion Department of Agriculture. Freedom from to the air for the first time and could dirt and moisture is necessary to not escape a feeling of trepidation. prevent decay, and sorting regularly These big machines give a feeling of during the storage period to remove defective specimens from the storage seem strange to be far above the room are essential. The amount of room in the plane

To determine internal injury in such products as apples, potatoes and turnips, samples should be cut from each lot and examined. Fruits and vegetables that are not sound should not be stored.

Best way to store apples is slatted bushel crates which allow for air circulation. Decay or infection from diseases can be prevented by avoiding finger nail scratches. punctures and bruises caused careless handling and dropping

fruit into baskets or bags. Potatoes should be allowed to dry thoroughly before storing. Put in dark portion of the room since light affects their quality. When placed in piles or in bulk they should rest on a false floor, and against the wall upon which slats have been nailed, with upright ventilators placed every few feet in the pile. Insufficient ventilation may cause breakdown, button rot or black-heart.

Onions keep best in crates or shallow trays, though open mesh bags may be used. Ventilation is important since the bulbs continually give off moisture which must be removed. They should be dry and well cured before placing in storage, and no field frost, sun scald or decay in evidence. From one to two inches of stem should be attached and well

shrivelled. One method of storing cabbage is! to bring the heads into the storeroom with roots attached, and place these roots in moist sand on the floor with heads in upright position. second method is to cut the heads from the roots leaving about two inches of shank attached and placing on the side shelves of the storage with two tiers on each shelf. Speciheavy are in prime condition for storage. Strip off outside wrapper leaves since these interfere with ver tilation important in the storage of this vegetable. Cabbage heads should

be well cooled before storing. Cauliflower may be stored for a considerable time by lifting each plant with root attached, leaves tied up over the head, and planting close together in moist sand on the storage

If boxes are used place a thin layer of sand at the bottom of each fill with alternate layers of vegetables and sand. If piled in heaps on the floor, a covering of sand is suf-

Town And Country Meet To Do Fuel Saving Job

This Autumn it is patriotic "hot stuff" to be cold. Because fuel must be saved officials of the Wartime Prices and Trade Board are urging Canadians to use as little as possible. Many people who live in the country still experience that early morning chill in houses which have no central heating equipment. This year their city neighbors are asked follow suit and manage with small fires lighted only for an hour or two in the morning and in the evening. The coal administrator is anxious

The first year or two nothing but

Ahead and Save Labor Several ways in which New York farmers are saving labor without working faster, harder, or longer hours, are cited by Dr. Van B. Hart of the agricultural economics department at Cornell

They take time to plan ahead. For example, they figure out what is to be done tomorrow if expected weather prevails, and what each person will do if the weather

They have a blackboard or pad hanging in the barn to keep a list of "rainy-day" jobs. They ask themselves, in regard to such jobs as milking, feeding, and cleaning stables, these questions: Can we save on unnecessary travel? Do we waste any motions? Do we do unnecessary jobs? Would it pay to have other labor-saving equipment and can it be obtained? Are forks, shovels, feed carts kept in the most convenient places? How much water is carried to livestock? Are feed boxes, chutes, doors, gates

conveniently located and equipped to save labor? They do not do things inefficiently because "it has always been done

that way." They do things on time. Increased use of weeders when the weeds have just sprouted or are small, for example, is one way to save labor, grow more ensilage corn, and less

'Dixie' Origins The name source of "Dixie" is obscure but three origins have been suggested: One, that it was a corruption of Dixon in the Mason and Dixon line, the popular name for the division between the North and the South. Another, that it referred to a generous and kindly planter named Dixie or Dixey, who owned a large number of slaves on Manhattan island before the abolition of slavery in New York. These slaves, in later years, looking back at their happy times at Dixie's made the name synonymous with Utopia. The flaw in this suggestion is that, if true, Dixie would be associated originally with the North while the early songs actually expressed a longing for the Southland. The third theory is that Dixie came from the French "dix," which was printed on \$10 banknotes issued by the Banque de Citoyens de la Louisianne in New Orleans. These banknotes popularly were called "dixies" and the bank known as "Dixie's bank." Eventually it was applied to the entire South.

Eight Charity Degrees Moses ben Maimon (Maimonides), Jewish teacher, philosopher, astronomer and physician (1135-1204) taught that "There are eight degrees or steps in the duty of charity." The last, or eighth degree reads: "The most meritorious of all is to anticipate charity by preventing poverty; namely, to assist the reduced fellow-man, either by a considerable gift, or a sum of money, or by teaching him a trade, or by putting him in the way of business, so that he may earn an honest livelihood, and not be forced to the dreadful alternative of holding out his hand for charity. This is the highest step and the summit of charity's golden ladder."

Painted Doorknobs Unique Note With most metal accessories no onger obtainable, painted doorknobs and keyhole plates add a note of unique decoration to many rooms and are especially welcomed when the fixtures are old and worn lookng. Coat them first with enamel and, when dry, apply the design with a fine camel's hair brush. Colors or black and white may be used as preferred, and the decoration should, of course, be in keeping with the room scheme. Flowers or Old English initials are attractive in living or bedroom, and a boat, pilots wheel, or other sporting motif ties in well with a game room.
