Hog Kill Day Is Being

Revived Throughout U.S. Revival of butchering day, when farm neighbors help each other prepare their meat supply, is expected this fall for three reasons.

It will be cheaper, transportation Nominating Committee for the elec- and packing plants will be relieved of some of the record pig crop, and since farm people won't be going many places anyway, this will be another way for them to be good

A family of five should have 675 Cecil McCann, "She is just away," a. pounds of meat a year for proper nutrition. This is provided by three 225-pound hogs and half of a 1,000pound steer.

Nearly \$19 is saved on the meat from three hogs when it is butchered at home.

It is figured that a 225-pound hog is worth about 14 cents a pound on the farm, or \$31.50. This hog will cut out about 113 pounds of meat and 32 pounds of rendered lard which, at the butcher shop, will cost \$42.79. Thus on one hog farmers can save \$11.29, or \$33.87 on three nogs. This of course does not consider any cost for processing or locker rent. Deducting \$10 for processing and \$5 for locker rent, at \$10 a year, leaves a net saving of \$18.87 by killing three hogs at home. A side of beef from a 1,000-pound steer butchered at home and stored

This is not all the saving. If the farmer sells the hogs and the equivalent of the half steer, he would have increased his income \$159.50, on which most farmers this year will pay \$20 to \$30 income tax.

Virginian's Apparatus Is Excellent Deer 'Chaser'

A Virginia game commission release describes a brand new method of keeping deer away from farm crops-a barking watchdog, leashed by a short chain to a long overhead "trolley-wire" stretched between two trees at opposite ends of a field. According to the commission this worked for Warden O'Neil of Wise county in keeping deer out of a strawberry bed when intermittent shooting, flashing lights and smelly repellents failed. Not a single deer visited the field after the dog took

The commission recommends this practice as a good means of makents. After a brief honeymoon spant ing a virtue of a deer-chasing dog's chief vice. However, it warns that wire or chain should be equipped with insulators to prevent painful and terrifying shocks to the dog during electrical storms. Care should electritian in the new synthetic rubber | chain cannot become entangled in trees, brush, crops or other encumbrances. Water, food and shelter for
