• Eggs are right around the top of the list of food-for-victory items. Are your birds carrying their share of this extra production burden?

We'd like to see you try Dr. Hess Poultry PAN-A-MIN in your ration. The reason is this—the Research Farm birds lay as many as 23 more eggs per bird per year when they get PAN-A-MIN.

And here's why—PAN-A-MIN is a tonic that stimulates the consumption of feed—also supplies essential minerals. It's our belief that both are often necessary for heavy production. We sincerely believe PAN-A-MIN will help you produce more eggs.

HYDRO RURAL WARTIME EXTENSIONS

With labour and metals drained by war, an unavoidable limit is placed on the number of new rural Hydro services that can be installed in 1945. Nevertheless, your Hydro is extending essential rural services to the absolute limit of labour and materials available.

About 8000 applications, made and approved during 1944, still await service, and many have since been added. These will be connected as soon as possible. It will take all the man-power, materials and effort that Hydro can command to bring service to these applicants in 1945. Those requesting service along existing power lines may, in some cases, be connected before prior applicants who require lengthy extensions. We regret that many approved applications may not be completed before 1946.

In 1944 your Hydro constructed about 400 miles of new rural lines, and added 9776 new customers.

With some 1200 Hydro employees in the armed services or on loan to the government for technical work, along with the shortage of many materials critical to war needs, your Hydro has done and is doing everything possible to extend electricity to essential services. If your turn seems slow in coming, please consider the wartime conditions under which your Commission labours, and be assured that it is doing everything possible to serve you with the utmost speed.
