Soil conservation, he stated, implied more than its name expressed. It implied improvement in the productivity of the soil and not merely maintenance of its present condition. Originally, work in this field was confined essentially to the control of soil erosion. Now soil conservation included a wide field of activities.

In his article, Dr. Hopkins states that Canada, being such a large country greographically and having so many differenct soils and climates that a Canadian average included many dissimilar regions. There were nevertheless, two principal agricultural areas-the sub-humid to semiarid Prairie Provinces, and the humid region of Eastern Canada with its dairy and mixed farming agriculture. Each of these large territories included many smaller areas where conditions were much different. Notwithstanding these great differences in soil and climate, there was not strange to say, as much difference in the various provincial average yields of some of the principal field crops up to a record level. The reason for T. Gilchrist, Clerk as might be expected. Long time provincial average yields showed little change.

The fertility of the soil was sometimes compared with a bank account to which deposits, or from which withdrawals, might be made. It was also compared with a mine, the term farmer who depleted the fertility of However, the processes involved in crop production were much more involved than those in either of these comparisons. In the first place, it was impossible to know the amount of fertility in the virgin soil which might become available to crops; the rate of loss brought about by various factors was difficult to measure, while variable weather conditions each season added to the difficulty of studying any possible hour of 9.30 o'clock in the forenoon trends.

soil types and innumberable climatic only are admitted for the following conditions which together with previous farming methods, created a complexity of soil conditions difficult to understand. LOVE FOR THE HOME TOWN

The success and development of a community depend to a large extent on how far people feel real affection for it. If some just look at it as a place where they earn money and find a place to live, and if they would just as soon live somewhere else if the opportunity offered, many of them will not feel the energy and enthusiasm to do a great deal for

the home town. If they feel a real and strong love for the home town, it is a pleasure for them to co-operate so far as they can with movements for home town progress and give to community causes, and to do what they can to beautify their home places and make them attractive. People do well to realize that the home town does a great deal for them, in giving them work and opportunity and many advantages, and they should be glad to do what they can in return.

DRASTIC TREATMENT

A man received a sharp letter from one of his creditors. He wrote back to this firm: "Dear sir: Every month I take all the bills I have and put them on the table, shuffle them and pick out six which I pay. Now if I have any more of your impertinence, why next month you'll be even out of the shuffle."
