## COMMUNICABLE DISEASE CONTROL REPORT IN HALTON

In certain areas of the county, there have been local outbreaks of some of the milder communicable diseases of childhood.

Up to the week ending March 11, 113 cases of measles had been reported during 1950 in the county, 38 in January, 64 in February and 11 in March. Acton reported 87 of these cases. During the same period 288 cases of mumps were reported, 105 in January, 97 in February and 26 in March. 114 of these were reported from Georgetown and 59 from Esquing Township. Since the beginning of the year 22 cases of German measles have been reported. In the week ending February 25, 15 cases were reported, 11 from Oakville and 4 from Trafalgar Township. In the week ending March 11 there were 3 from Oakville and 1 from Trafalgar Township.

In the week ending March 13, German measles and measles have shown a sharp upswing in the Oakville-Trafalgar area. Oakville reports 35 cases of German measles and 7 of measles. Trafalgar township reports 1 German measles and 4 measles. The age distribution of these cases is of interest in that 32 of the 36 cases of German measles and 8 of the 11 cases of measles occurred in the age group from 10 to 19 years. In other words, the outbreak is centred in the high school age group.

This week, too, Milton has shown an increased incidence of mumps. There were 19 cases reported. Up to this week, 16 cases had been reported from the beginning of the year.

These figures are, at best, only an approximation. They are obtained from reports by physicians, by public health nurses and by the school authorities. Undoubtedly, many more cases have occurred but have been so mild that a physician has not been called and no report has been made.

The minor communicable diseases of childhood tend to occur in cycles. There will be a year with a large number of cases, then a period of several years with comparatively few cases and, again, an epidemic year. None of these 3 diseases are placarded, nor is chickenpox. Quarantine for these diseases has been done away with, since it has been amply proven that it does little or nothing to control these diseases. Contacts are no longer quarantined. These measures are Provincial Department of Health regulations.

Using Oakville as an example, the cyclic nature of these diseases is well demonstrated: Cases reported 1948, German measles, 2; measles, 25. Cases reported 1949, German measles, 3; measles, 9. Cases reported 1950 (to March 18), German measles, 40; measles, 17.

The child with these diseases is required to stay home for varying periods by Provincial regulations. Chickenpox—until skin is clear. German Measles—6 days from appearance of rash. Measles (red)—7 days from appearance of rash. Mumps—16 days from onset of swelling.

By Provincial regulation, there is no quarantine of contacts and his brothers and sisters may continue at school.

All these diseases are most liable to spread in the day or so before they are recognized and a physician called. Thus, the child with a cold, running eyes, or a swelling in the neck should be kept at home until it is decided as to whether he is developing one of these diseases.

The length of the quarantine period does not necessarily mean the child is ready to return to school. This will be judged by his general condition by the parent, or if there be any doubt, by his family physician.

KEEP AFTER THESE MARKETS

So long as there is any hope of reform, it would not be wise for Canada to cut itself off entirely from these world trade conferences. But we might as well face the fact that they are not likely to solve our troubles overnight, asserts The Financial Post. And certainly we should not concentrate on them to the exclusion of other deals we might make much closer to home.

Right next door with the United States and also with the other Western Hemisphere nations farther south there are opportunities for greatly expanded trade. An enormous increase in our exports in that direction since the war indicates the possibilities. Our new discoveries in oil and iron ore, our new industrial strength and diversification make us more valuable as a supplier, more valuable as a customer.

We can still hope for world-wide trade reform. We can still work for it. But at the same time no effort should be spared in pushing our trade with the South.
