The stakes surveyors use to mark land boundaries have a way of disappearing—and that can mean a whole survey has to be done over again. But now there's a new all-aluminum stake that is tough for time and weather and playful animals to handle. It won't rust, rot or weaken. And two barbs open out at right angles, underground, to prevent its being rooted out by even the most muscular bear. It's a Canadian invention, made of Canadian aluminum, by a Canadian company, to meet a typically Canadian problem.
