

... natural gas for modern living

Modern man is awakened by an alarm clock, whose spring or motor was perfected by gas in a heat-treating furnace. Modern man bathes and shaves with gas heated water, dresses in textiles, whose processing required large quantities of industrial purpose gas. He eats a gas-preserved and gas-cooked breakfast, reads a newspaper with ink dried by gas, listens to news on a radio whose tubes were formed in a gas flame; it does a thousand times a thousand chores a day.

Throughout modern man's day, gas is ever present through the manufacture of products he uses and enjoys. "Where food is finest, it's cooked with gas" is the motto of practically all hotels and restaurants. Gas bakes bread, pasteurizes milk, presses clothes, launders and dries linen, incinerates household waste, forms steel in giant open hearth furnaces, helps produce china and glass and silverware on dining tables, fabricates the automobile in which modern man rides, has more than 25,000 industrial and commercial uses in addition to its great comforts in the home.

Only gas gives you all seven home services. Residential gas appliances are the range, water heater, refrigerator, air conditioner, clothes dryer, incinerator and heating systems. Generally speaking, today's natural gas appliances are completely automatic, requiring little atten-

tion. Ranges, for instance, are clock-controlled to turn on at a given time, allow your meal to cook for a pre-determined period, and then shut off. The latest innovation for ranges is the automatic temperature controlled burners. The range oven is controlled automatically to give you constant heat at a pre-selected temperature. Automatic gas water heaters provide more hot water -- faster than any other method. In house heating, the natural gas furnace is so completely automatic that the temperature set by the home owner is maintained regardless of the weather. The natural gas refrigerator is the only refrigerator that can give you these four important features: automatic defrosting, automatic ice maker, 10 year warranty and no moving parts.

The gas incinerator rids the modern home of messy, unsanitary garbage pails. Silently, safely, a gas incinerator reduces all garbage and rubbish to a fine ash. No more wearisome trips to the garbage pails in all kinds of weather. And last... but not least is the automatic gas laundry dryer--the only clothes dryer that dries so fast... costs so little.

Natural gas is a modern fuel for modern living. It is safe, silent, clean, and dependable. "If it's done with heat... you'll do it better with gas."
