

Bridges . . .

Halton doesn't have any covered bridges but it has an interesting array of other types. They're all effective in spanning streams, tracks or roadways and their different designs scattered over north Halton give effective service. Bridges are an important part of the transportation story that affects the area. Rapid changes have taken Halton from the mud and toll roads of earlier generations to the super highways and rapid transit systems of today and bridges are still playing major roles, as they elevate traffic to span streams or other lanes of traffic in futuristic patterns.
