

Better gas mileage with less smog

(NC)-Getting better gas mileage while cutting pollution emissions is no longer a pipe dream for automotive manufacturers and the environmentally conscious. Every driver needs to do his/her best to help reduce emissions. One way to do so is by using Autolite Platinum and Double Platinum spark plugs. New "plugs" can reduce emissions while promoting quicker starts and boost fuel economy. The platinum tip virtually eliminates gap erosion, which is the archenemy of fuel efficiency and pollution control.

With gap erosion your engine is more likely to misfire. (A misfire occurs when a cylinder does not fire properly,

causing a loss of power and reduced fuel economy.) The unburned fuel causes increased levels of polluting emissions.

With more and more provinces enacting or considering passing emission control legislation it is a good idea to seek out and find ways to reduce the amount of air pollutants emitted by your vehicle's exhaust system.

Not only will our planet benefit, but you will as well. With a single Autolite Platinum spark plug you can drive 100,000 kilometers before needing a spark plug change and with the Autolite Double Platinum your vehicle will go for 150,000 kilometers before

it's time to get a new set of plugs.

One word of warning however, the extended life of the Autolite Platinum and Double Platinum spark plug does not mean that your engine should be neglected for the 1st 100,000 kilometers. Before reaching 100,000 kms, your car will need several oil and oil filter changes, probably a PCV valve and frequent under the hood inspections.

Platinum and double platinum spark plugs cost a little extra but will give you double or triple the service life, increase your chances of passing government emission tests, promote easier starting and save you money on lower fuels costs.

For more car care information, please visit the Autolite website at www.autolite.com or call our toll free technical number at 1800-333-1106.
