

One name left out

Volunteer Elise Clement of the Milton and District Horticultural Society was honoured at the Ontario Service Awards ceremony September 25.

Her name was inadvertently left out of the story listing the local recipients, which appeared in Tuesday's issue of The Champion.

The Champion apologizes for any inconvenience this may have caused.

Time to name Foodland Ontario's mascot, kids

E.W. Foster School students (from left) Cody Kraus, Colin Fraser, Rebecca Robertson, Jenna Moon and Taylor Waver surround the yet-to-be-named Foodland Ontario mascot during its visit to the school last Friday. E.W. Foster students had input on the creation of the mascot. Now, Ontario students between the ages of 6 and 16 years will have the opportunity to name the mascot through a contest, with ballots available by calling 1-888-428-9668 or by visiting the Foodland Ontario Web site at www.foodland.gov.on.ca. The deadline for entries is November 9.

Adapto, new digital hearing aid with VoiceFinder™ function improves speech understanding.

adapto™

Just like our eyesight, our hearing deteriorates when we get older. We often have to ask people to repeat themselves.. We have to turn up the television. All of which can be a burden not only to people with hearing loss but also to their friends and family. It is not possible to get spectacles for the ears.

However, it is now possible to get a mini-computer for the ears that improves speech understanding and provides natural sound quality.

The new hearing device is called Adapto and offers a special VoiceFinder™ function designed to specifically detect human speech.

In much the same way as the human brain, the digital VoiceFinder™ constantly monitors the environment for important speech signals. As soon as speech is detected, the tiny hearing computer makes millions of subtle adjustments to make words come through clearly - even in difficult listening situations.

However, unlike hearing aids that amplify all sounds all the time, Adapto's VoiceFinder™ automatically switches smoothly to a more comfortable, relaxing listening mode when there is no speech present - like

tinted sunglasses that automatically darken as the light increases. This important function protects the user from constant bombardment of irrelevant noise and ultimately from annoyance and fatigue at the end of the day.

Adapto is available in a full range of cosmetically attractive, small styles ranging from behind-the-ear instruments to invisible in-the-canal (CIC) models.

The miniature chip technology used in Adapto allows for one of the smallest CIC instruments available today.

Adapto hearing instruments are now available at: **OAKVILLE HEARING CLINIC, 22 Lakeshore Road West, Store Front #4, Oakville, ON L6K 1C5, Tel: (905) 849-7888.**

For more information about Adapto and hearing loss, contact **Oakville Hearing Clinic at (905) 849-7888** or log on to www.oti-con.ca.
