Hearing Aid with VoiceFinder

When your hearing is normal, your brain automatically adapts to changes in the sound environment. When your hearing is impaired, this ability is significantly reduced. It's more difficult for you to focus on speech in noisy surroundings and tune out irrelevant sound.

Adapto is different!

It works much the same way as your brain. The core of Adapto is the VoiceFinder™. The VoiceFinder™ automatically detects when speech is present. It processes incoming sound to give you

maximum speech understanding. And it ensures that you get the most out of conversation.
