Making a difference with EcoSense

(NC)—Most Canadian try to manage their lawns and gardens in a way that will "make a difference" to the environment. According to Scotts Canada, some gardeners will weed by hand, some will plant native species and use mulch to reduce pests and conserve water, while others will try alternative products.

"The Scotts EcoSense line of products provides families with alternatives to traditional lawn and garden care products," says Glenn Martin, who is responsible for Scotts' control products, including Scotts EcoSense, in Canada. "Whether it's an alternative or a more traditional lawn and garden care product, Scotts is committed to giving gardeners the ultimate choice," Martin says.

Every year, Scotts, Canada's largest lawn and garden company, surveys consumers to learn the needs, habits and attitudes of home gardeners. Scotts research shows that more than two-thirds of home gardeners believe the products they choose for lawn and garden care will have an impact on the environment and about one-third of home gardeners report they would choose to use a natural product if they felt it was effective.

Derived from sources like chrysanthemum extract, feather meal, diatomaceous earth, acetic acid (vinegar), wheat and insect pheromones, Scotts EcoSense was developed to meet the growing demand for alternatives to traditional pest control and lawn care products. The line is supported by an educational Web site, www.scotts ecosense.ca, which helps gardeners manage their pest problems with a range of solutions, including prevention, mechanical solutions and healthy lawn and garden care practices.

The Scotts EcoSense line up of products includes a natural lawn fertilizer, ready-to-use weed and insect control sprays, insect dusts, outdoor fly and yellow jacket pheromone traps. EcoSense products are identified by Scotts' caring mother earth symbol. Every package invites consumers to "Care today ... Benefit tomorrow".

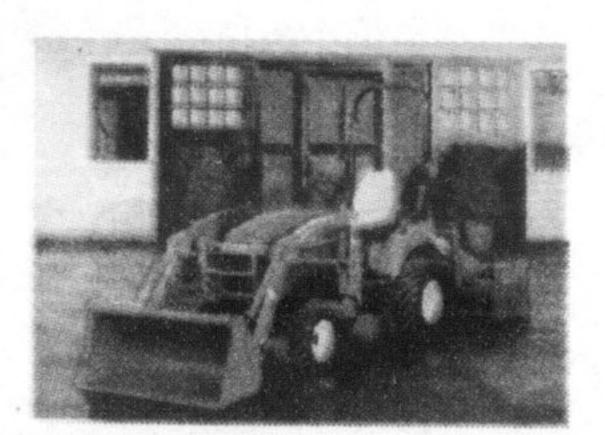

790 W/300 LOADER & LX 5 **ROTARY CUTTER**

0% APR for 36 Months"130

Package price \$20,900. 27 HP Engine Tractor with a 8 Forward and 2 Reverse Gears. Great Work Horse! Loader not exactly as shown!

More Pond Myths Debunked

Water in the landscape is a lifestyle more and more people are choosing every day. Check back each week as we dispel some of the common myths surrounding this latest trend in gardening.

Myth 7: Water gardening involves a lot of hard work.

Fact: Not necessarily. A well-designed ecologically-balanced pond needs only a scoop of powdered (it comes in liquid too) bacteria every month or so, the skimmer basket cleaned every two weeks, plus an annual clean-out in cold climates. In gardening terms, an ecologically-balanced pond is about as much work as a maintaining an established perennial border, minus the weeding and watering. Aquatic plants water themselves.
