More Pond Myths Debunked

Water in the landscape is a lifestyle more and more people are choosing every day. Check back each week as we dispel some of the common myths surrounding this latest trend in gardening.

Myth 9: Predators will eat all your fish.

Fact: Predators are out there, but there are things you can do to protect your fish. Koi lovers beware, in shallow water garden ponds your prize specimens are at risk, mainly from blue herons or muskrats.

But, whether you have pedigree koi or the inexpensive lovable "mutts" that most pond lovers prize, you can fight back. Muskrats are not as common in backyard ponds as they prefer to hunt in large bodies of water. Raccoons don't care to swim for their supper, preferring to dip into the buffet from the banks. A properly designed and constructed pond will deprive these varmints of dry access to the deepest part of the water garden.
