free admission

Spin, Pop Boom!

Tuesday, March 13, 11am

Our energetic show of reactions in action will leave your audience hanging on the edge of their seats. You will be amazed with our wild demonstration of centrifugal force; watch out you could get wet! The children will be enthralled with the exotic sounds of our didgeridoo tube. Our rainbow maker is a colourful display that introduces reactions from different temperatures. Our booming balloons provide a surprise as you watch our hydrogen reaction!

Fire and Ice!

Wednesday, March 14, 11am

This fast paced event includes foggy dry ice storms and a fast paced introduction of frozen carbon dioxide. Our flash paper will amaze you as it appears and disappears before your very eyes. Meet our special friend, Eggbert and watch as our scientist defies the laws of gravity. The audience will be amazed by our sizzling scissors, our Mad Science shower and our bubbling beakers. Volunteers from the audience can taste a special Mad Science "burp" potion.

Up, Up and Away!

Friday, March 16, 11am

This spellbinding event introduces children to the principles of air and pressure. Children are amazed as a soda bottle is crushed before their eyes. We will then experiment with our own hot air balloon and demonstrate how a parachute really works. Our vortex generator will blow you away and the crowd will get to see an incredible exothermic reaction take place. We will wow you with our finale, as you watch our scientist ride our Mad Science hovercraft.

Have fun at our Activity Station after each show;
featuring dry ice, how planes fly, vortex generator, flash paper and more!
