

# Home, Lawn & Garden

## It's a good time for preventative door maintenance

• from **SPRING** on page C4  
clean the track. By oiling all the mobile parts you will reduce the noise initiated by the motor. If it is still too noisy for your liking, then nylon rollers would help reduce the noise.

### Release Cord

Pull on the trolley release cord and operate the door manually. Is it difficult to open and close? The electric operator only replaces manual operation, therefore it must move freely. If you have trouble operating it, contact your Garaga dealer. A well-balanced door must not weigh more than 10 lbs (4.5kg). For your safety as well as your child's, check the automatic safety reverse system of the door opener EVERY MONTH.

### Springs

Do not attempt to adjust the extension or torsion springs yourself. They are wound very tight and only a specialist should adjust them, for your own protection.

### Final Advice

Consider your garage door as an important part of your home. With appropriate annual maintenance, it will operate beautifully. Ask a qualified Garaga Dealer installer, to lubricate and adjust your garage door at least

yearly. In a 10 step check-up, he will lubricate all the above mentioned parts and perform any required repairs.
