Registration No. 8100028 Fertilizers Act

"At this time of the year as the sun gradually sinks lower in the western sky, the changing light conditions cause the grass plants to discard their old roots and produce new ones.

This means that during the last two weeks in September and the first two in October is the time to give the lawn its second most important feeding of the year.

I've specially formulated a no-name fertilizer for Loblaws... a 4-8-12, which means it contains 4 percent nitrogen, 8 percent phosphorous and 12 percent potash. A 10 kilogram bag of it will cover 2200 square feet of your lawn.

I've proven it many times over that lawns fed at this time of the year come through the winter in much better shape and get off to a faster and better start next spring."

John Bradshaw
Horticulturalist
