brought the following reply.

pressed cork products.

"The weight of ordinary cork as noted by us from time to time from tests of stoppers used in the labora- feld, Germany, in 1901. tories averages about 91/2 pounds per cubic foot. The greater stiffness of balsa is probably another reason for preferring its use in making model airplane parts."-Montreal Herald.

Must Have Sunshine to Live Were the sun to go out the earth would be plunged into darkness, relieved only by the feeble light of the stars, for the moon, of course, shine only by reflected sunlight. Within a few days the temperature would be so low that all plant and animal life would be frozen to death. Before many days the ocean would be frozen solid, and soon after the atmosphere itself would freeze, forming, first, a layer of liquid air upon the surface of the earth and then a layer of solid air. We are dependent upon the sun for our food and fuel, for plants cannot grow without the energy of sunlight, of years ago.

Boston's Landmarks back a century or two, fit strangely into the modern scheme of things. This was a primitive lighting system, mans. General Motors Dealers.

"Tite-Lap" Galvanized Roofing is true to its name. Every sheet has nine places to nail across the bottom—only 4 inches between nails. The end lap is so tight as to be invisible, and it positively excludes driving rain or snow. "Tite-Lap" is a development of the famous "Rib Roll" which we introduced ten years ago. It has all the good appearance and weather tightness of "Rib Roll" but, on account of the re-arrangement of the ribs, each sheet has

galvanized roofing which ensures easiest ap dication, and most permanent weather projection, at low cost. Tell us what you want to roof, giving ridge and rafter measurements and we will send you TITE-LAP estimate and show you how you can save money.
