PRO DRIVING TIPS

NUMBER 5 PREVENTING SKIDS

William Knight, Sr.,
of Provolet Bulk
Transport Inc., has driven
5-million km and has
49 years of accident-
free driving.

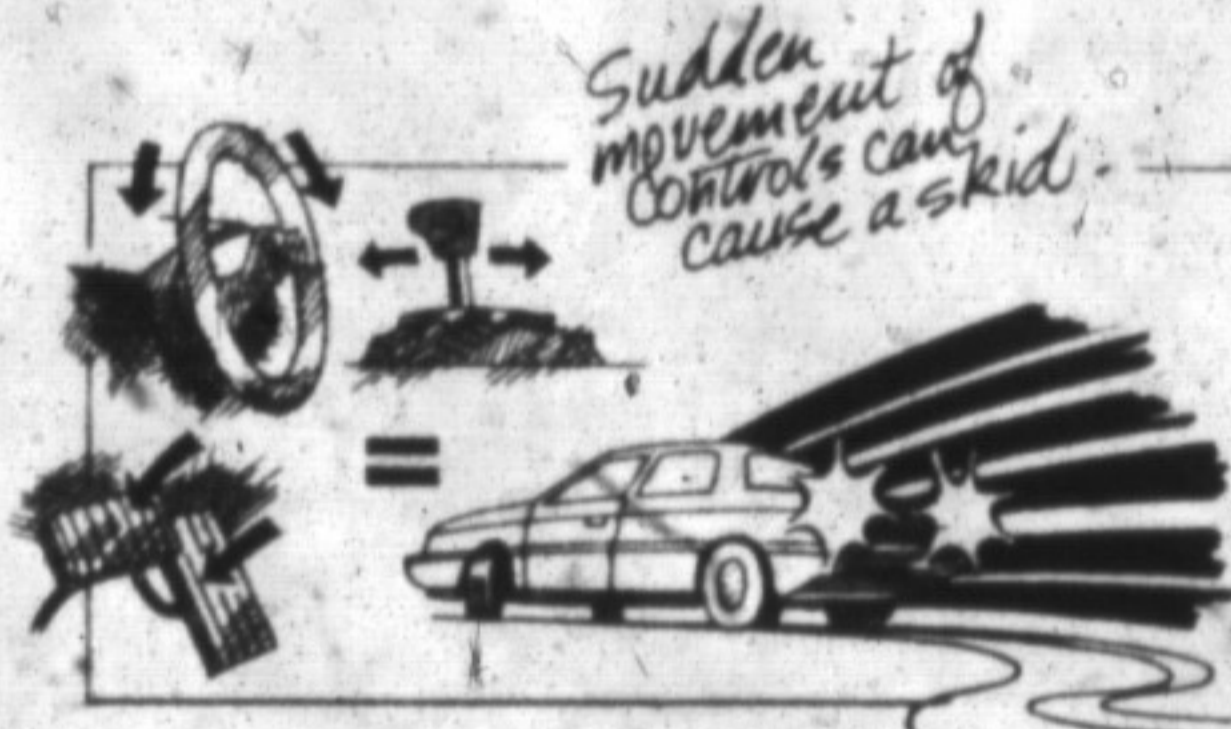

A skid is usually caused by the driver's failure to react in good time and by driving too fast for road conditions.

Any sudden steering, braking or accelerating action is dangerous on a slippery surface.

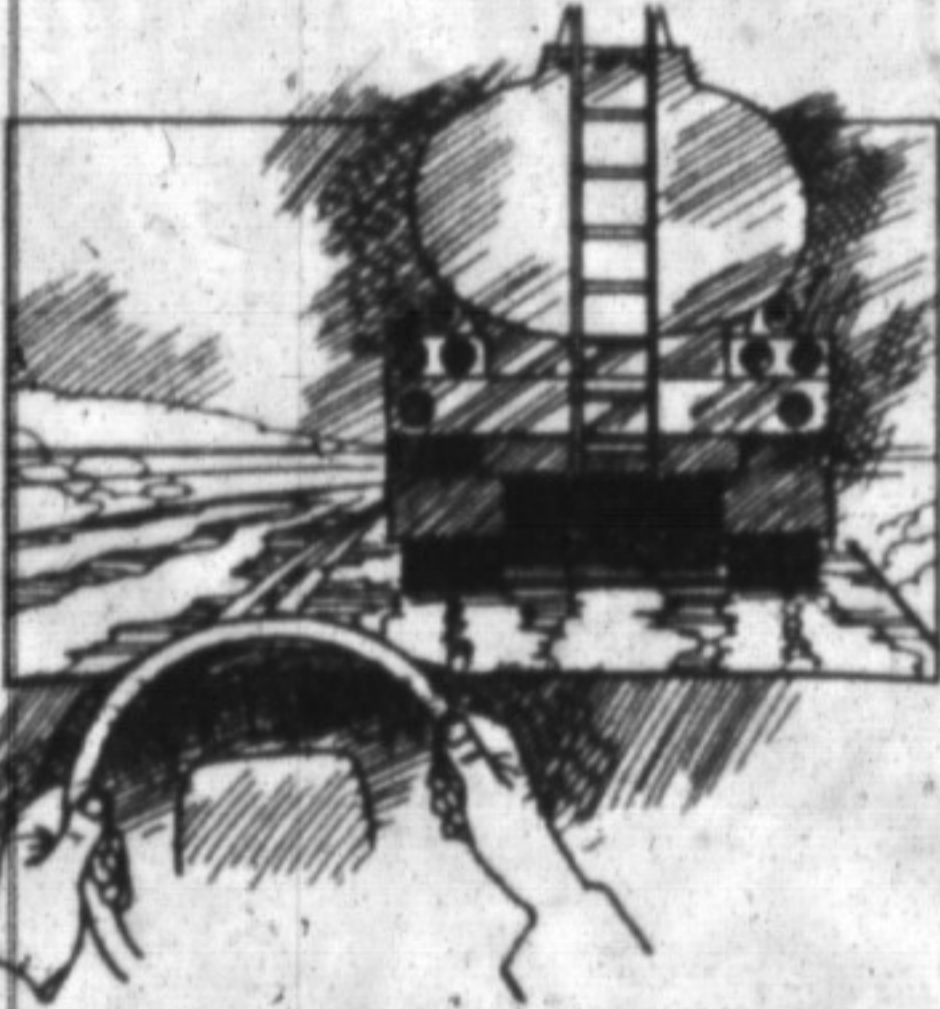

Give yourself time to react. Look ahead and read the road conditions.

Because someone else is foolish enough to drive fast, there's no reason for you to be misled into thinking the conditions are safe.

If you have a car with manual transmission shift gears before you reach the upgrade of a slippery hill. Shifting half-way up may cause the wheels to spin.

Be patient when you want to overtake. Greater distance and time are needed to pass safely.

For your free copy of the Ontario Trucking Association Partners in Safety booklet, write to Partners in Safety, Ontario Trucking Association, 555 Dixon Road, Rexdale, Ontario M9W 1H8. Phone: (416) 249-7401 Fax: (416) 245-6152
