

Music systems can look as great as they sound

In the past, if you wanted good sound and didn't want a vertical rack or something that looked like a stack of lab equipment, you didn't have much choice in a music system.

Sophisticated equipment that brings music to your ears can sometimes be an eyesore in any decor other than high-tech. And, in small spaces, or mixed with period furniture, large hi-fi systems can look clunky and cumbersome, ruining an otherwise pretty room.

Now you can own a music system that fits on an ordinary bookshelf, looks great and sounds like a full-sized system.

Using computer designed circuits, audio engineers have created new miniaturized electronics and speakers that deliver big system sound. Working with interior designers, they have created systems that fit in any room and become part of the decorating scheme.

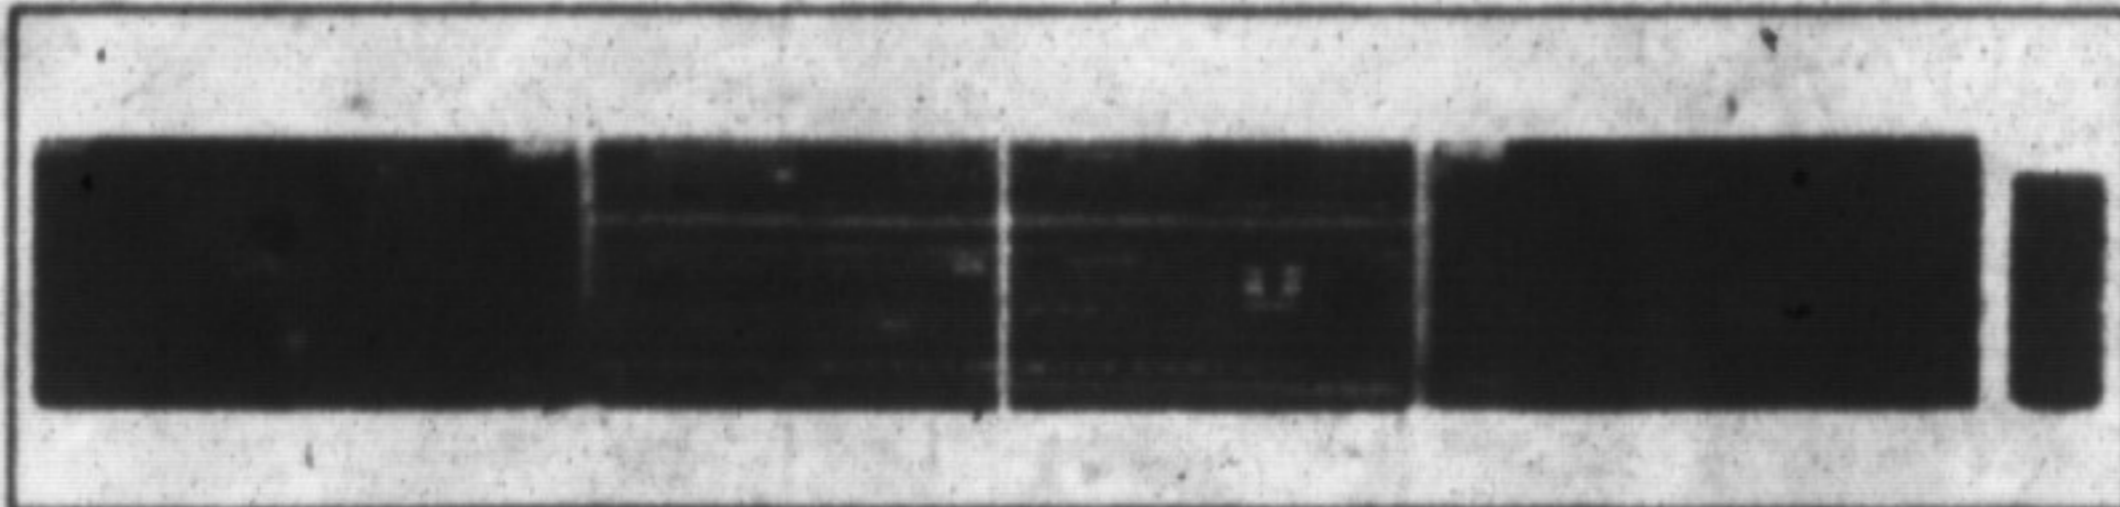

Typical of this new approach is the MC-1000 from Sansui, a world-renowned home audio equipment manufacturer. It consists of four elements, two electronic components and two speakers, each measuring less than 10 1/2 inches deep by 11 inches wide by 7 1/4 inches high. All four units are styled in a muted pearl-grey textured finish with black knobs and contrasting amber indicators and display.

The two electronic components can be stacked vertically, one on top of the other, or horizontally, side by side. The speakers can also be used horizontally or vertically. This flexibility permits placement for maximum visual as well as aural impact.

Don't let the size fool you. Music fills the room, not the stereo. And the sound is absolutely incredible. The system has a frequency response of 20 to 20,000 Hz so you hear every nuance in the music. Sansui's engineers have included a special dynamic bass boost circuit in the amplifier that makes the small speakers sound auditorium-size.

Convenience engineering doesn't stop with the 23-key remote control. To assure you get the best performance with the least amount of effort, Sansui engineers have provided five preset equalizations for the most popular kinds of music—flat (no equalization at all), rock, jazz, classical and cinema. You can, of course, use the tone controls to shape sound to your personal preference. The volume control is motor driven for precise setting and has a lit LED that lets you watch the setting change from across the room.

The tuner has 16 FM and 8 AM presets so you can call up your favorite station with just a touch of the remote. The dual cassette deck is auto-reverse on the playback transport and you can make tape copies at

DESIGNED FOR VISUAL IMPACT, the Sansui MC-1000 mini music system fits easily on a shelf and provides room-filling sound. The system includes an AM/FM Stereo Receiver with 24 station presets and a combination dual cassette deck/CD player. Features include: Surround Sound capabilities; five preset equalizations; Bass Boost; and motorized volume. The system comes complete with full-function remote control.

normal or high speed. Dolby B noise reduction is included in the cassette electronics to assure high-frequency performance.

The CD player has a 3-beam laser pick-up for precision tracking and offers 16-track random programming. Its features include repeat play and 3-inch disc play without an adapter. Automatic Music Program Search (AMPS) allows you to automatically sample each song on a disc or tape before programming your selections.

Most important among the system's many other features is its surround sound capabilities. Most movie video-

tapes and many music videos use surround sound technology to create dynamic realism. The Sansui MC-1000 has a built-in matrix surround circuit in its amplifiers that lets you enjoy surround sound by connecting the audio output of a stereo VCR and a second pair of speakers.

So, if you want a unique audio system that looks and sounds great, costs less than \$750, and fits in any room—the living room, bedroom, den, a dorm room or even a professional office—audition the Sansui MC-1000 or one of the similar systems. You won't be sorry you spent the time.

How to take control.

Royal Credit Line* puts you in control. It's like a pre-arranged loan, yours to use, in whole or in part, any time you need it.

You may not want or need it now, but with a Royal Credit Line you can have a pre-arranged amount of money standing by.

Imagine the advantages of having money available to you at any given moment. Imagine making use of that money at very good interest rates. And imagine the security of knowing that the money is there—even if you never use it.

That's the Royal Credit Line. It's as simple as writing a cheque. And because your credit is pre-arranged, you won't have to reapply each time you make use of Royal Credit Line.

A Royal Bank Personal Banker will help you decide how much credit to establish, based on your present

financial situation. Once this has been determined, the money is yours to use if and when you need it. And remember—it costs nothing to arrange Royal Credit Line.

When you write a cheque on your Royal Credit Line, you pay interest only on the portion of the credit you use, and only for the time you use it. And your repayment terms can be as flexible as you need them to be.

Royal Credit Line is a responsible way to manage your money. And at very attractive interest rates.

Look into Royal Credit Line. Drop into any branch or call: 1-800-668-9700

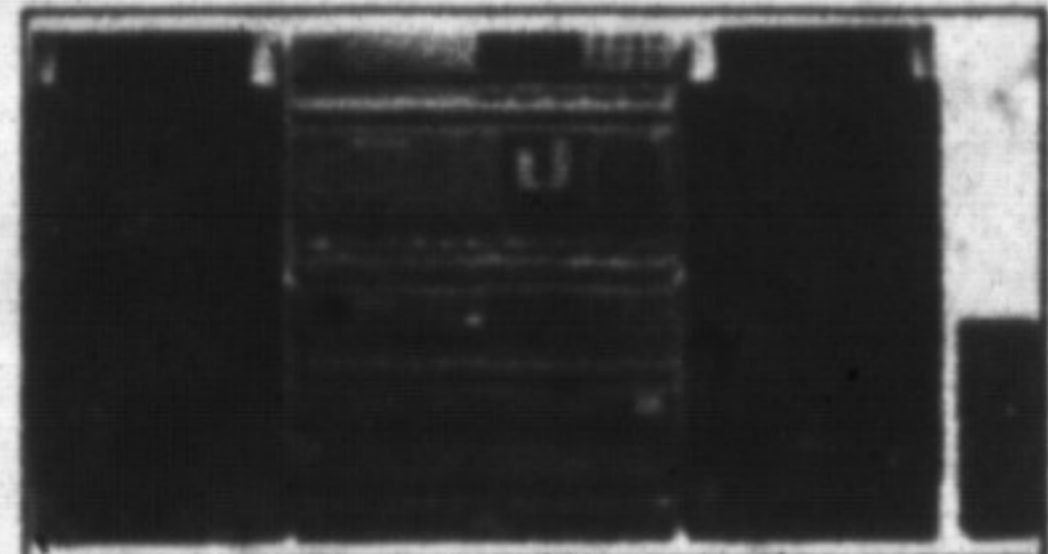

And take control of your finances today.
