Electric Technology Improves Cooking

The same electric technology that has made the country's steel-making industry more energy efficient and environmentally clean, now improves the way we cook at home. Induction cooktops can improve your cooking, while they conserve precious energy. Using less energy at home helps to keep the environment cleaner, as it reduces monthly electric bills, according to the Edison Electric Institute and the National Rural Electric Cooperative Association, two national electric utility trade associations.

The induction cooktop, sold by General Electric under their Profile brand, cooks like no other cooktop. The reason is that it cooks by induction, not conduction. Beneath a smooth, glass-like surface, an induction coil creates heat from within the pan itself, through magnetic friction. Every other cooktop first must create heat, and then apply it to the bottom of the pan. The induction cooktop also makes cleaning spills easy because the food can't burn on the cool cooktop surface, nor are there hard-to-clean drip-pans.

Induction cooking offers you advantages compared with con-

duction cooking: more precise heat control, instant response, and greater cooking safety. Induction cooktops also heat evenly. The entire surface of the pan is exactly the same temperature—from the pot's top rim to its bottom center. This means no hot spots to burn food. If you're simmering or performing other delicate cooking chores—like melting chocolate—this is critical.

The GE Profile induction cooktop offers you 10 temperature settings. This gives you precise cooking, unlike a cooktop with low, medium and high settings. And the induction cooktop responds instantly to your temperature changes. If the pot is boiling over, touch "off" and it's off.

Because the induction cooktop heats without a flame or hot element, it greatly reduces the risk of burns. Your kitchen will stay cooler too, since only the pan gets hot, not the air. In the summer this will cut down on air conditioning bills.

Call your electric utility's residential marketing department for more information on energy efficient cooking, as well as other ways to lower your home's energy bill.
