Subscribers not receiving the TIMES regularly from the carrier boys, are requested to leave word at the office that we may have the evil remedied.

The Toronto Leader learns by telegraph tha with reference to the prohibitory order again the importation of live stock into the Unite States, that the collectors of customs of Amer ican ports on the frontier have received a message from the Secretary of the Treasury, Washington, stating that the order does n apply to cattle moved from the Western States ria Canada. There will therefore be no sto page of the stock traffic between the Western and the Eastern States by way of Canada.

The York Herald is offering the Fenians some sound advice which they would do well to follow: " An Irish republic in this country, with its

capital at Union square and its money devoted to the support of a set of officials who cannot govern anything, not even themselves, is manifestly an absurdity. No matter how many resolutions may be passed in favor of O'Mahony, they cannot change the resolution of all sensible people to have nothing more to do with this person. No matter how strongly Roberts may be supported, he can never revive the delusive dreams of Fenian independence which have cost so many people tens and hundreds of dollars. The farce of an Irish republic in America is quite played out and the actors dispersed. The brotherhood. has become a thing for jokes and laughter. and it were well not to force the public to res cial Secretary till his return from abroad. Mr. gard it otherwise than good-naturedly. If the Congress now in session will declare the bro therhood disbanded, make a judicious disposi- re-election. tion of the funds now on hand, and then adjourn sine die, it will earn a world-wide reputation for wisdom, prudence and discretion, and re-

LECTURE.

We gave, the other day, a paragraph notice the lecture delivered in the Mechanics' Hall J. Langton, Esq., Provincial Auditor, on Recent Researches into the Physical -Constiution of the Sun." The lecturer, described the various solar phenomena, and, particularly, the spots on the sun, mentioning the most generally received theory in regard to their nature or cause, and after explaining the transnission of light and heat, and the part played by the gaseous envelopes supposed to enclose, as it were, the sun's more solid body, he went of heat which leaves the sun. This could be represented by its mechanical equivalent. cal force which would generate, or, rather Here we left the ground of strict experiment and calculation and plunged into the region of theory. The lecturer's eloquent conclusion,

xhibit great heat and show marks of fu sion: We know also that hardly a clear night passes without our seeing numerous meteors moving with great velocity, and exhibiting orilliant light, and at particular seasons they are seen in immense numbers. In November 1833 there was a magnificent display seen on this continent when as many as 240,000 were estimated to have been observed during nine hours. The height of these meteors above the earth and their velocity have been frequently measured by observations of the same meteor velocity, greater than anything which can be space, and following the same laws as regulate the motions of the earth and planets; and that | ever, be pushed night and day. being encountered by the earth, the resistence of our atmosphere produces intense ignition by which many of them at least are dissipated in vapour. CORRESPONDENCE. OIL OR NO OIL.

To the Editor of the Ottawa Times. Sin-Knowing that the inhabitants of Otta wa and vicinity feel a great interest in the prosperity of "The Central Canada Oil Company," I send you a truthful and exact repor of the progress and prospects of the different Wells under my charge. North Gower Well :- In this well, at the

depth of two hundred feet, oil and gas was struck, the psessure of the gas being sufficient to cause the water to flow over the surface of the well, which flow continued for two days, when a small crevice was struck, water then ceased flowing and subsided two or three feet below the surface. At two hundred and twenty feet, a crevice of ten or eleven inches was struck, in a black sand rock, the tools being withdrawn, and the sandoump let down, which, when brought to the surface was found to contain unmistakeable Petroleum. This occurred in presence of ten or twelve respectable farmers, including the Reeve of the Township, Mr. Cowan.

Information was immediately sent to me at Ottawa, upon receiving which, I immediately repaired ty the scene of operations, and found matters to be as above stated. It being the opinion of the workmen as well as myself that a large "pocket," as it is called in oil parlance, had been struck, I

ordered from Montreal tubing, pump, sucker rods, etc. Upon the arrival of which pump ing will commence, and the true value of the vein ascertained. The indications of a "pocket" being struck

in this well are fully as good as any found in Pennsylvania before pumping is commenced Well No. 1, North Augusta-This well not yet sufficient in depth to expect a " strike" but more or less indications show themselves

as the well goes down. Operations have been Davis is becoming the general topic of conmuch retarded by some accidents occurring to. versation.
