The construction is simple and natural, all the extraneous lumber in the body of the instrument is dispersed with; the sound boards are merely two arched planks of thin wood, like the front and back of a violin; the strings are attached to a strong iron frame, which is separated and entirely independent of the case, thereby dispensing with the old harp form of string ing by substituting straight bridges, preserving at the same time the Over Strung Bass, of which Me GCEAN STEAMSHIP COMPANY Driggs is the Inventor. By these improvements we gain much more vibratory power, at the same time preserving all its purity and richners of tone. SUMMER SERVICE.
