BEAUDRY'S NEW SERIES OF SAWS

This important improvement in saw mills, patented in Canada and in the United States, consist especially in a new method of hanging and operating gang saws for manutacturing lumber, without the use of the ordinary gate. The gang of saws are attached at each end to cross heads, supported by a bifurcated pitman, and are the only weight to be supported. The saws and crossheads being very light, the speed of the saws is considerably increased. The new system operates well, and wood can never be more properly sawn, and in larger quantities. With the use of this improvement, mill propriet rs and lumber dealers can realise profits much larger than with
