Denver searches for new frontiers

By RAINA GROSSMAN

John Denver says we should look up to the future. To demonstrate he is taking to flight in his latest environmental special, "The Higher We Fly," airing Sunday, June 15, on ABC.

The special deals with the history of aviation, but also with Denver's interest in conservation, solar energy and employment. His message is that we can be hopeful about our future if we direct ourselves to capitalizing on technological trends.

A devoted pilot who owns his own plane, Denver is a long-time admirer of astronauts. He says he would "gladly trade in my guitar for a few days in space." His father was a professional pilot in the Air Force; yet Denver found that his poor vision prevented him from becoming a pilot.

sophisticated jet, the Air Force's F-15. Then switching to the near future, Denver commands a simulated ride aboard the Space Shuttle, intercut with actual film of the Space Shuttle in action. A conversation with astronomer Jessy Greenstein at Mount Palomar Observatory takes us beyond the immediate future, to the question of what man will find when he ventures into space.

Denver thinks the Space Shuttle might make its first trip in just a few years. He is, however, disappointed in our diminishing commitment to the space program. The program, he says, is a boon to our economy. Computer clocks came out of the space effort.

"The application of high technology is like a war," he said, "we make as much money off of it. The more we extend ourselves, the more we help our economy." He wasn't kidding when he said that a sure-bet job is space carpenter. There will be thousands of jobs available, he said, as we schedule space shuttles. Relating space technology to our unemployment problem, Denver mentioned his brother-in-law who graduated from school with highest hon-
ors and can't find a job. "But there are jobs available if you are aware of present and future trends." Denver is optimistic. He feels our biggest problem is our attitude. Our stubbornness. Our being unwilling to make changes. "People are simply not aware of our resources," he said. "There are ways to help our energy problem. For instance there is a way to have solar power channeled from space that will microwave energy on earth." But this measure isn't seriously considered.

— TELE-PUZZLE —

"The Higher We Fly" looks at all kinds of air travel, from hot air balloons racing above Snowmass, Colo., three short jumps in a re-creation of the Wright brothers' original Kitty Hawk Flyer, with Denver taking the place of Orville Wright to a lift-off in the most

— TV DIALOGUE —

A TRICK — Could you please tell me if the movie "Magic" has been on television and, if so, when? My husband says "no," and I say it has. I do remember both of us seeing it on TV, as well as in the theater. My husband dared me to write and ask. So please tell me if I've been having strange dreams or am sane. — "Dared," Junction City, Kansas.

We've both been having strange dreams, because I could have sworn it was on TV. But, according to NBC, when they air "Magic" next October, it will mark the film's television premiere.

HANGING — Can you please tell me what happens to J.R. on "Dallas"? As a "Dallas" fan I'm very frustrated in regard to the follow-up of J.R.'s shooting. Please help! — E. McCarthy, Pleasantville, N.J.

Well, you can put your black dress back in the closet because it's going to take more than that bullet to dispose of J.R. Ewing. Hagman is back on location shooting next year's shows, having received a more than generous raise in salary to match the ratings his gleeful greed and corruption raked in for "Dallas."

IMAGINE — I have recently read in your column about Janet Gaynor. My cousin, Marjorie Guthrie White, played in some films with Janet Gaynor. If I recall correctly, the one that really

impressed me was called "Just Imagine." It was a story about what things would be like in 1980. I can't help but think this is the year it should be re-played. — Mrs. Lucy Kennedy, Brandon, Manitoba, Canada.

Your cousin, Marjorie White, was one of the stars of "Just Imagine," but I'm afraid Janet Gaynor wasn't. The other stars of this 1930 sci-fi musical were Maureen O'Sullivan, El Brendel and John Garrick. The film probably isn't as impressive 50 years after the fact and I doubt that we'll be seeing it on television this year, unless one of the public stations runs it.

BRIDAL BUNCH — I have two questions for you. Who played Joshua, the middle brother, on "Here Come the Brides"? And how old is Maureen McCormick who played Marcia on "The Brady Bunch"? Your answers will help settle a bet. — K.J., Rohnert Park, Calif.

David Soul, who went on to trade in his ax for a Magnum pistol on "Starsky & Hutch," played middle brother Joshua between Robert Bolt and Bobby Sherman. Soul even married one of the brides, Karen Carlson, his second wife since divorced, during the two-year run of the show. Maureen McCormick is in her early 20s, with 11 years having passed since Carol first married Mike and gave birth to the Bunch.

PUT UP DUKES — Can you tell me if the "Dukes of Hazzard" will be on next season? — Mark Schadt, Greensboro, N.C.

Yes, I can, and yes, it will. OTHER WOMAN — My friend and I have a bet. I say the woman who plays Bailey on "WKRP in Cincinnati" is the same woman who played Mrs. Kotter on "Welcome Back, Kotter." My friend says she's not. — D. and D., Southington, Conn.

Although the two look alike when hidden behind their horn-rimmed glasses, Jan Smithers plays Bailey Quarters and Marcia Strassman played Mrs. Kotter.

(Send your letters to Pepper O'Brien, NEA, 200 Park Ave., New York, N.Y. 10166)

It's not because big business is afraid of the competition. Rather, Denver asserts, the problem is awareness. "We have to raise the heads of people who are unconcerned and unaware," he said.

That is his aim. He hopes "The Higher We Fly," will show people who are afraid of flight just how sophisticated the operation is. Secondly, he hopes people will consider the vast technological developments and direct themselves toward new frontiers.

"Many people are naive about the specifics of flying," he said. "As you increase your understanding, you become less fearful. Flying is an incredible thing with a lot of control. It's a physical thing. You put your body through the pull of gravity, weightlessness and you have to develop coordination to maneuver the controls. I want to get people's interest up. "I think we should continue to search for new worlds. Perhaps this is our last frontier."
