

Penetanguishene Police Chief Robert Cummings says a popular misconception about drinking and driving is still held by many. He often hears remarks like:

"I can drive home now. I haven't had a drink in the past 45 minutes", or, "Driving right after drinking is how you get into

Myths about drinking and driving eliminated in the accidents. I always

wait at least half an hour before driving."

Question: Can an intoxicated person sober up in 45 minutes or half an hour? How long should a person wait after drinking before getting behind the wheel?

The Answer: Alcohol is eliminated from the body at a fixed rate. When alcohol is distributed throughout the body in the bloodstream, part of it, usually 2 to 6 per cent, is

breath, urine and sweat. The rest is burned (oxidized) by the liver

at a fixed rate of approximately one normal sized drink per hour.

The safest approach is not to drink before driving. For those who do drink, consumption should be limited to one drink per hour throughout the evening to stay safely below the .08 per cent blood alcohol content mark, says Chief Cummings.

### Well, well, well

200-foot deep town well at the Penetanguishene Waterworks undergoes a rehabilitation process to remove sediment which builds up on the screen and reduces the flow. Water and Light Commission manager Ernest

Lalonde hopes the flow of the well, now down to 400 gallons per a minute, will be increased to 700 or 800 gallons of the "purest water in Canada" when the cleaning of the screen is completed.

## Town well rehabilitated

at Penetanguishene Lalonde says the town Waterworks is getting a saves money by spring cleaning.

Manager Penetanguishene Water and Light Commission, says the 200-foot deep well needs "rehabilitiation" every five or six years to keep the water flowing.

The artesian freeflowing well, which delivers up to 1,000 gallons a minute when it's working at its best, has been producing only 400 gallons a minute lately.

The reduction in flow occurs when the screen gets plugged up with fine sand and calcium deposits. The welldrilling company uses chemicals to dissolve testing himself, without the deposits and jets of air under pressure to blow the sediment off the screen. The cost of

The 24-year-old town this procedure will be the about \$8,000, but rehabilitating the old Ernest Lalonde, free-flowing well inof the stead of using a well which would require a pump to bring the water to the surface.

> Water in the free-flow well is under pressure because of the geological formations in

the area. Water flows directly into the reservoir instead of having to be pumped. Pressure in the well is so great that at times the water has flowed out the top of an 18-foot high pipe attached to the top of the well house by the workmen.

Free-flowing wells are not very common in 1978.

the area, said Lalonde. There is another one in Orr Lake, and one just north of Elmvale.

"We're keeping our fingers crossed that this rehabilitation process will bring the flow back up, as it has in the past," said Lalonde. The last time the well was cleaned out was in

### Officers in training

Constable Robert Skeaff the of Penetanguishene police force just completed a two-week breathalyzer course in Toronto.

The course instructed him in the use of the Borgenstein

Breathalyzer Unit and will enable him to do needing the assistance of an officer from Midland or the local OPP.

All Penetanguishene police officers have completed their training

in the Young Offenders Act, coming into effect on April 1, 1984.

Officers have all completed their training to qualify for their certificates in Cardiopulmonary

Resuscitation. The use of the alert unit, a portable

was explained to Penetanguishene police officers in a seminar Tuesday morning, given by OPP instructors.

breathalyzer device,

The local force will be purchasing an Alert unit this year, says Chief Cummings.

Penetanguishene firefighters and police officers

teamed up for a joint in service training program

last Tuesday, March 6 at the Mental Health

Centre. The men practiced their resucitation

skills on the "Resuci-Annes". Most of the men

were certified in CPR last November and were

brushing up their skills, while three members

were taking the course for the first time, said

Penetanguishene fire chief Ted Light.

#### Former warden honoured

A framed photograph of . Penetanguishene Reeve Art Stewart now hangs in the lobby of Georgian Manor, to commemorate his year of service as Simcoe County Warden. Georgian Manor is one of three Simcoe County Homes for the Aged. Reeve Stewart said he felt very honoured, and was also surprised by the presentation. "They invited me over for luncheon - I didn't know anything about

the picture," he said. "It's quite an honour." Reeve Stewart enjoyed a luncheon with members of the Committee for Homes for the Aged and Simcoe County Social Services. Left to right are: present warden of Simcoe County, His Worship Ross Whiteside, Reeve Stewart, and Anne Monkman, Chairman of the Social and Family Services Committee.
