Literature. My Bachelor Uncle.

Written for the York Herald. BY DOB. Concluded from our last: I hastened back to the parsonage and was met at the door by Harry.

finger, now didn't he, Rosa? Mrs. Mavers laughed, and told her it wasn't fair for her to keep all her secrets from Annie, but enlist her confidence and she would never hear it mentioned again.

Lees and on the afternoon of my arrival managed to slip Annie a note to that effect. I went to our resort and soon was with my old and dear friend Annie. She came up with a feeble step, so unlike the time when she ran for Sylvia with one shoe off.

the room as naturally as possible and North observing that they were alone drew the curtain with blue from his bosom, and asked if memory still retained the circumstances under which that was given.

Uncle North and Aunt Annie are now getting old and grey, but still they retain all the ardor of their youthful love, and as they often wind their way through the fields, some villagers are curious to know what Mr. and Mrs. Still will can possibly see that interests them so much in a little arbor on the edge of the wood.

A SIMPLE AMUSEMENT. In these days of high winds and strong gales, a cheap and beautiful amusement is within the reach of all. A little trouble is all that is necessary to enable one to enjoy the delightful music of the Aolian Harp.

SLEEP.—To bring about sleep men have had recourse to various contrivances. Bacon, before retiring at night, used to indulge himself with a posset of strong ale, which helped better than wine to subdue the sprightly activity of his fancy.

On Tuesday, June 12th, on the occasion of his marriage with the Princess Mary, the Prince of Teck received from Her Majesty the order of the Bath.

The steamship Java left New York on Mar 30th, reached Queenstown on June 6th and had £1,500,000 in specie on board—the largest amount known to have been risked in one bottom—yielding the owners £3,750 of freight, and £200 commission to the captain.

It is reported from Sebastopol that the Russians are restoring the Malakoff.

Mr. Gale, the blind man who discovered a process for making powder incombustible, has invented a revolving rifle which he says, will fire 100 bullets a minute. A specimen has been laid before Government.

BLACK RAIN.—The black rain showers, which are now so well known in Scotland, and about which the inhabitants of a part of Aderdeenshire are in the way of speaking with no greater astonishment, when one of them falls from a peculiarly coloured dark cloud, blackening materials exposed to it, than they speak of a white shower from a snowy cloud, have been at last recognised in England.

Between the beginning of January, 1862, and the middle of January, 1866, there have been no fewer than eight authenticated black showers in Scotland. Seven of these fell in Slains, and the extensive surrounding district. Two of them were accompanied with pumice stones, some of the balls of which measured 8 to 10 inches in diameter, and weighed upwards of 1lb. avoirdupois.

The first four, including the Carlisle shower and the eighth, were contemporaneous with outbursts of Vesuvius and the intermediate three with those of Etna. But now through the instrumentality of the Rev. Mr. Rust, of Slains, who was the first to draw general attention to the Scottish shower, it has been discovered that England gets her share likewise of black showers, although she did not think that she was so distinguished. On the 3rd May of the present year (1866), at 11 a.m., and again at 4 p.m., the town of Birmingham and surrounding country were, for three quarters of an hour each time, enveloped with black clouds producing darkness and rain.

Accidents took place in the streets, vehicles were upset, gas had to be lighted at some of the crossings, and nearly in all places of business, Mr. Rust, writing for information, got inquiries instituted, and the result is found to be that a large quantity of black rain, similar to the Scottish, fell, and blackened rain water in tank, and clothes on greens, not only in Birmingham itself, but at rural places many miles distant unaffected by soot and smoke, and even windward of that town. So far as known, however, no word has yet arrived of any volcanic outburst, although, judging from what has taken place in Scotland a probability exists that some volcano has been in a state of activity, emitting its contents, whether it be heard of or not.

How to Cure Diphtheria.—Diphtheria, of late years, has become a very common and serious malady. Many have died from its effects, and, among our acquaintance, we know of some who at this time are suffering from this dreadful disease. It has seemed to baffle the experience and skill of our most learned physicians, and with no small degree of pleasure, is it that we transcribe a cure. It consists in thoroughly swabbing the back of the mouth and throat with a wash made thus:—Table salt, two drachms; black pepper, golden seal, natrate of potash, alum one drachm each. Mix and pulverize, put into a teacup, which half fill up with boiling water, stir well, and then fill up with good vinegar. Use every half-hour, one two, and four hours, as recovery progresses. The patient may swallow a little each time. Apply one ounce each of spiritous turpentine, sweet oil, and aqua ammonia, mixed, every four hours to the whole of throat and to the breast-bone, keeping flannel to the part.

THE EXPANSION OF THE LUNGS.—Wholesome advice is contained in the appended, from some unknown source: Step out into the purest air you can find, stand perfectly erect, with the head and shoulders back, and then, fixing the lips as though you were going to whistle draw the air, not through the nostrils, but through the lips, into the lungs. When the chest is about full, raise the arms, keeping them extended, with the palms of the hands down as you suck in the air, so as to bring them over the head just as the luffs are quite full. Then drop the thumbs inward, and after gentle forcing the arms backward, and the chest open, reverse the process by which you draw your breath till the lungs are entirely empty. This process should be repeated three or four times during the day. It is possible to describe to one who has never tried it the glorious sense of vigour which follows the exercise. It is the best expectorant in the world. We know a gentleman, the measure of whose chest has been increased some three inches during as many months.

In the extraordinary trial, in which Mrs. Ryves sought to establish herself as a princess of the royal family, her mother having been married to Duke of Cumberland, the jury found a verdict against the claimant. The Times treats the case as an imposture.
