ALGOMA.

To the Editor of The Herald.

SIR .- It is quite probable many of of your readers will be surprised to read a letter written by a resident here; as it is generally looked upon as almost beyond the pale of civilization, but before they have read many of my letters, they will, no doubt, have come to the conclusion that it does not possess the imagined terrors, which the North is supposed to have.

For some reason, there is not a natur-al desire to move North, except, perhaps, during the few hot summer weeks, and the consequence is that the vast and almost unbounded forests stand in their primeval grandeur, giving shelter to their various inhabitants-forests which cover land, better than which no man

need look for, For the most part, the shores of the lakes are rocky; the ridges rising from a few feet to 1000, though the latter elevations are rare, and are confined to the northern shore of Lake Superior. Traffic being almost exclusively confined to the water, many land-seekers, judge the whole country by the rocky shores, and imbide the notion that the place is unfit to support a fair population, and no doubt such has been the cause of its

slow improvement. Happily, all men are not alik, and while a few have refused to make a faith-

We live in an age of improvement and ful comparison with other places, we progression. Such is the assertion we have, along the shore of fluron and part of Superior, many furmers who are comparatively well-off, while small villages at the Bar and in the Senate. It is the bere and three dot every few miles. The groundword of all the facts brought for- soil is principally a clay loam, or sandy ward to prove that the nineteenth cen-timothy grows to the height of six feet, while roots of all kinds give a proportionactivity, industry and intelligence. The ate yield; 70 bushels of potatoes having chronicles of the present age record many a marvel, first brought to light under its On the whole the land will favorably auspices, which has proved a benefit and the next the next of Halton and Peel, and the ridges of York.

talents committed to their keeping, twenty cents per acre; and each adult, the Free Grant or 320 of the latter; and after the lapse of five years may apply minds, have expanded into cities of wealth, intellect and power. The dis-ed if the laws relating to said Free Grant Lands have been complied with, viz :- to have cleared and under cultivation 15 acres, a house crected 16 x 20.

Hay averages \$20 per ton; oats 50 again manufacturing those materials into the thousand shapes and forms \$1.00; peas \$1.00; so that as the de which confer utility and eventually mand is always, and will be good, pros pects are bright for those who have a lot here.

To the tourist the upper lakes offer, munity under Britan's protection, and this Dominion has probably more natural deposits of mineral wealth within its fold awaiting appliances of here the tourist the upper lakes offer, perhaps, the best inducements to be found in the Dominion,—plenty of game, from the playful striped squirrel to the bear, the woods abound with partridge, labor and skill, than any other of the hare and pigeons, deer and bears are easily procured ; while the water offers abundance of fowl, fish and fur; indeed appliances are all within the reach of the he is a very inferior sportsman who canintelligent and enterprising, whose duty not, in a few hours, bag a good load of and pleasure it should be to aid in devel- game. And while the sportsman has the privilege of enjoyment, the invalid nced not despair, as the scenery and climate are most inviting and pleasant;

Why is it with such vast mineral, the shores are usually lined with beauti-agricultural and piscatorial wealth, only ful islands and enclose most beautiful gather three or four pansies. Several awaiting laborers to call them forth and disseminate their benefits throughout the Dominion, the inhabitants of it leave

Agricultural.

Reperiments in the use of Manure.

Science declares that in order to the most being made of manure it should be housed, and saturated abundantly with plaster or some other substance that will absorb or fix the ammonia. The majority of farmers in this country pay no attention whatever to the care or prepar-ation of their manure heaps. In Britain it is one important branch of high farming to economise the manure, and apply it in the best possible condition. Lord Kinnaird, at a Farmer's Club Meeting recently, gave his practice and experience

and two of them were manured with or-dinary barnyard manure, and two with an equal quantity of manure from the covered shed. The whole was planted with potatoes. The products of each acre was as follows :-

Potatoes treated with barnyard manure : One acre produced 272 bushels. One acre produced 292 bushels. Potatoes manured from the covered sheds.

Bheds. One acre produced 442 bushels. One acre produced 471 bushels. The next year the land was sown with wheat, whon the crop was as fol-

lows : Wheat on land treated with barnyard manure. One acre produced 48 bushels, 18

pounds (of 61 pounds per bushel.)

One acre produced 42 bushels, pounds

(of 61 pounds to the bushel.) Wheat on land manured from covered sheds. One acre produced 55 bushels, 5 pounds

(of 61 pounds to the bushel.) One acre produced 5; bushels, pounds

(of 61 pounds to the bushel.) The straw also yielded one-third more upon the land fertilized with the manure from the covered sheds, than upon that

to which the ordinary manure was applied. There is no other treatment claimed in these experiments than that of simply keeping the manure under cover, and our readers will agree with us that the gain is remarkable. Had Lord Kinnaird saturated his covered heaps plentifully with plaster or some other such substance to seize upon and fix the escaping am-monia, he would have found the difference in results still greater.

Plenty of Flowers.

For the sake of your children have plenty of flowers around your homes. Plant enough so that it may be no sin for the little ones to gather large handfuls and make playfellows of them. When I was a little girl, it was not generally understood that gathering a part of the flowers caused the plant to continue its blooming longer, and to produce finer flowers than if all its blossoms were allowed to remain on the parent stem and ripen seed. It was then a "naughty" deed for children to pluck any but the most common flowers. Little ones cannot always be trusted to help them-selves from the flower beds as they may choose, but there should be beds of bright flowers where there will always be some to spare for the children. One little girl, not four years old then, used to ask me for pansies before she was dressed in the morning, every day for weeks, last summer. She could hardly count the fingers on her hand, but I used

Age, when whitening for the tomb, is worthy object of reverence. The passions have ceased. The old linger with the young-and, oh, how careful should the young be to reward them with tender affection and the warmest love, to dimit.ish the chill of ebbing life. The Spartans looked on reverential respect for old age as a beautiful trait of character. Be kind to those who are in the autumn of life, for you know not what suffering they may have endured, nor how much of it may still be their portion. Do they seem unreasonably to find fault and murmur ? Allow not your tion. anger to kindle against them ; rebuke them not, for doubtless, many have been the trials and crosses of earlier years, and perhaps their dispositions, while in the spring-time of life, were less flexible than your own. Do they require aid Then render it cheerfully. Forget not that the time may come when you may desire the same assistance from other that you render them. Do all that is needful for the old, and do it with alaority, and think not hard if much is ro quired at your hands, lest when age set difference at your hands, lest when age seed its seal upon your brow, and fills your limbs with trembling, others may wait unwillingly, and feel relieved when the coffin has cover d you for ever.

Be Kind to the Aged

EPPS'S COCOA. - GRATEFUL AND Comporting. - "By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful apof digestion and nutrition, and by acarelul ap-plication of the fine properties of well-selected loccos, Mr Epps has provided our breakfast tables with a delicately flavored beverage which may save us many heavy doctors'bills. It is by the judicions use of such articles of diet that a constitution may be gradually built up unit strong enough to resist every tendency to disease. Hundreds of subtle maladies are destinger up are acaded to attack whereare there - 38 to discosso. Hundreds of sublie matadies ale floating around us ready to attack where ver there is a weak point. We may escape many a faat shaft by keeping ourselves well fortified with pure blood and a proport, nourisked frame."--*Ciril Service Gazetle*.
