

THE WEEK'S NEWS.

HOME.

The fur sales of the Hudson's Bay Company show a decline compared with last year.

The fourth of May is officially announced as the date for the annual meeting of the Dominion Rifle Association.

All signal stations in the St. Lawrence and the Gulf have been instructed to send in reports twice daily after April 15th.

Jas. Balfour, architect, Hamilton, secured first prize against 53 competitors for the design for an art museum building at Detroit.

The question of railway disallowance in Manitoba and the North-West is expected to be discussed by the Cabinet at an early date.

The Toronto City Council have adopted by-laws for the issue of debentures for \$400,000 and \$350,000 for the erection of a courthouse and city hall.

Hon. Mr. Blair, Premier of New Brunswick, has introduced a bill into the Legislature for the abolition of the Legislative Council of that province.

The Department of Marine has completed the charter for a fast schooner, to be added to the fleet of Dominion cruisers for the protection of the fisheries next summer.

The Canada Shipping Co.'s application for additional dock accommodation on the Mersey has been refused, and the question of the appropriation of berths will be raised.

It is understood that Mr. Sandford Fleming has been appointed a co-commissioner of Sir Alexander Campbell to the Imperial Conference to be held in London next month.

A requisition for the extradition of the Italian Trinarco, in gaol at Winnipeg for the murder of a fellow-countryman in Chicago, has been made to the Dominion Government.

The Dominion Parliament at the approaching session will be asked to vote a sufficient sum to organize and equip a troop of cavalry, bringing the permanent force up to one thousand men.

It has been decided that only the word "Saskatchewan" shall be engraved on the clasps to be awarded to those volunteers and Mounted Police who were under fire in the North-West rebellion.

The Minister of Agriculture has received a communication from the Aberdeen Harbor Board stating that that port has been licensed a landing place for foreign cattle not subject to quarantine or slaughter.

Two Canadian companies have secured the contract for supplying oil for the Dominion lighthouse service for three years, the quantity required, upwards of 75,000 gallons annually, being about equally divided between them.

Angus M. J. Gillivray, member for Antigonish, and John D. McLeod, of Pictou, have been sworn in as members of the Nova Scotia Government. McLeod has just been appointed Government leader in the Legislative Council.

While a number of young men were enjoying themselves coasting on one of the hills in Ameliasburg, Ont., one of the sleighs on which they were seated became unmanageable, striking a stump and instantly killing Byron Bush, son of Lewis Bush, of Rossmore.

Some boys playing on the rampart in rear of the Hotel Dieu hospital, Quebec, found what they considered a small bundle of rags and began to use it as a football. A dog that was with them seized the bundle and tore off some of the rags, when the body of a female infant was uncovered.

Eight hundred men are at work in the Rocky Mountains clearing the Canadian Pacific track from the snow left there by the recent slides. The company propose to build a cable road under some of the worst spots in the mountains so as to prevent future interruptions to the service.

The H. M. liquor dealers have largely backed down from their position of defiance to the law, and about fifty have taken out licenses of the eighty-three who applied for them. The number of liquor shops has been reduced from 180 to fifty, and barroom drinking is altogether done away with.

It is understood that the Government will not send an expedition to Hudson's Bay this year. The report of the results achieved in last year's expedition, including the reports of the observers who passed the winter of 1885-6 at the stations on the bay, will be presented to Parliament at the coming session.

Mr. Schreiber, Chief Engineer of Government railways, anticipates that railway construction in the Dominion this year will far surpass that of last year. A large number of new roads will be commenced in every part of the country, and many of the existing lines extended, making a total of thousands of miles of track and giving employment for an immense army of workmen.

AMERICAN.

Capital punishment has been abolished by the Maine Legislature, imprisonment for life, without the power of pardon, being substituted.

It is believed that the number of deaths by the Boston and Providence Ry. disaster has been overestimated. The number is officially stated at 24.

An unknown two-masted schooner is ashore near Nansett, Mass. All attempts to save the crew have as yet failed owing to the prevailing storm.

Considerable alarm is felt in New York at the absence of any attempt on the part of the quarantine officials to prevent the introduction of cholera from the Argentine Republic.

About half past three o'clock the other morning a fire broke out in the new Richmond hotel, in Buffalo, which with St. James' hall and a number of adjoining buildings were completely destroyed, only the bare walls remaining standing. Numbers of the hotel guests were imprisoned by the flames and were either burned to death or killed by jumping from the windows, while a still larger number suffered severe injuries.

HOPEIGN.

During a military parade at Calcutta a trooper shot and instantly killed Major Neill.

It is reported the Abyssinians have made a fresh attack upon Massowah and been repulsed.

Advices from Uganda, dated Jan. 24, say

Dr. Junker's caravan reached Emin Bey safely and that Emin is well.

The St. Petersburg police are alarmed by reports that numerous widespread bands of nihilists are ready for immediate action.

The Indian Government intends stationing a force on the frontier, in the Peshin district, to morally support the Ameer of Afghanistan.

It is reported that Emperor William on his birthday will proclaim Crown Prince Frederick William co-Regent, with the consent of the Bundesrath.

It is supposed that the plan to assassinate the Czar was planned by Degareff, alias Jablenski, the famous nihilist leader, who is believed to be in Switzerland.

Three London publishers have made liberal offers for the MSS. of the Queen of Italy's novel which was rejected when sent anonymously to a Roman firm.

The War Office authorities have made arrangements for the transportation from Canada to London during the coming season of 3000 horses for artillery trains.

The Radical press of Paris takes M. de Lesseps to account for saying France is the natural friend of Germany, and advises him to stay at home in future and confine himself to canal matters.

The Berlin Post takes a gloomy view of the St. Petersburg plot, and says it will require a superhuman effort on the part of the Czar to oppose the tempest of voices calling for war as a remedy for Russia's woes.

M. de Lesseps states that Prince Bismarck says he desires to see France become strong, because when her strength equals that of Germany the two nations will fraternize and form a combination that will guarantee the peace of the world.

Advices from Mandalay say Lieut. Goughly's mounted infantry surprised the rebel chief Boshway near Sidolia, Burmah, on the 9th inst. The rebels kept up a heavy fire for some time, but were finally defeated, losing twenty-two men. Boshway escaped.

Remarkable darkness enveloped London at noon the other day. It was as dark as midnight in the entire region of Charing Cross, Whitehall and the Strand, the atmosphere being pitchy black. In the east and southwest portions of the city, it was somewhat clearer. Snow was falling heavily at the time.

A Wonderful Invention.

A Philadelphia inventor predicts that the time is soon coming when the type-setting machines will be perfected and in use in all printing offices. The Philadelphia man is not far from right. Prof. Camp, of Estelline, some time ago became interested in the matter, and has labored on it to some purpose. He had but little difficulty in constructing a machine that would set type perfectly from the most complicated manuscript, and soon found that by the addition of a couple of cams and a thingumbob it could be used to write editorials. He had some trouble in getting it so that it would collect the bills and put its feet on the desk, but has finally succeeded. He does not hope to get it so it will pay the bills. After office hours, by touching a spring, it will turn out affidavits about the circulation list stopped. One of the most interesting sights in connection with Prof. Camp's invention is: when two of them are working together, to see one of them stop and attempt to borrow a chew of tobacco of the other, and not being successful turn around and strike the editor for some. Few editors can look on this without shedding tears. The professor expects to realize a fortune from his invention, and is confident that sales will boom right up to the highest notch as soon as it is understood that each machine is required to sign the temperance pledge before it leaves the shop.—Estelline Bell.

Bill Mortimer is one of those smart fellows who can tell about a man by merely looking at his handwriting or the shape of the back of his head, or the way he moves his legs when he walks. Bill was standing on the corner of Austin avenue talking to Colonel Dan Beatty.

"Do you see that boy across the street there with his back to us, looking in the store window?" asked Bill.

"Yes."

"Well, that boy is going to be a hero. He is going to conquer the world. He will be an American Napoleon Bonaparte. The boy has, right now, more will and intellect than any forty men in Austin."

"What makes you think so?" asked Dan Beatty.

"I don't think so at all. I just know it. Notice how he shrugs his right shoulder. That gesture was peculiar to Napoleon the Great, and to no other man."

"Nonsense," replied Dan. "That boy belongs to me. He has been vaccinated and it took. That's why he hunches up his shoulder."

"Is that so?" responded Bill. "Well, if he hadn't been vaccinated he would have had a brilliant future before him."

"Yes, and caught the small-pox, perhaps."—Texas Siftings.

In Union is Strength.

A unit and a zero long dwell side by side. In the wedded relation content to abide; They had stood by each other for many long years, Had shared life's enjoyments, divided life's tears, They were honored, respected, and loved by all men, And no one disputed their value as ten.

But dissension arose in their hearts, and grew worse, The law was appealed to and granted divorce; And this couple most foolishly broke up their home, Delighted with thoughts of their freedom to roam; But, alas! to their sorrow, they found when too late They had blindly invited a very bad fate.

When weary and heart sick they counted the cost, All the blessings of home were forevermore lost, While the world made no efforts its thought to disguise, And they saw themselves dwindle in every one's eyes; They discovered when homeless, alone, in distress, That a unit is small and a zero is less.

A wise old Arithmetic, knowing them both, Declared himself willing to state on his oath That the best of the two when alone, was no more Than a tenth part as much as the couple before, And he often repeated this story at length, To indorse the old motto: "In Union is Strength."

Heat and Cold

Is a never-failing cause of disease. At this season of the year neuralgia, toothache, and a host of similar diseases are rampant. The great question, then, is to find the quickest, surest, and most economical remedy. Poison's NERVINE exactly fills these requirements. It is prompt, efficient, and most economical, for it exceeds in power every known remedy, and is as cheap as inferior articles. A 10 cent sample bottle will give every person a chance to test it. Large bottles only 25 cents.

Spooner's Copperline.

Perhaps you don't know what Spooner's Copperline is. Perhaps you think it is a new cure for rheumatism, or a temperance drink, or a comforter for teething children, or a patent affair for keeping your feet dry, and turning your pedal extremities into galvanic batteries capable of melting the gold around your store teeth with magnetic currents. Well Spooner's Copperline is nothing of the kind, it is a purely non-fibrous, anti-friction metal, for use by engineers in fitting axle boxes. The great difficulty in all machinery is to keep the axles from heating. Brass, bronze, and labbit metal are used, but all have more or less friction which engenders heat, and if there is one thing in this life that amuses an engineer it is a hot box. It is not necessary to be an engineer to be acquainted with the peculiar merits of a hot box, but there is nothing will make an engineer so fully appreciate the beauties of a humble, lowly Christian spirit as to have an axle everlastingly tearing itself to pieces, in a red hot passion of fury. Now Copperline is a metal patented by Mr. Spooner, of Port Hope, which cannot by any means be induced to a glow of warmth. Its coldness would give the chills to charity. To nail a box with it, is like a visit from your wife's most estimable male, the axle has to hustle for all it is worth to keep from freezing. This metal is now being put up in handsome stenciled wooden packages suitable for counter display, and no hardware store claiming to rank above a tin pot concern can be without a stock. The Georgian Bay Consolidated Lumber Co., the Rathbun Co., the Wm. Hamilton and Peter Hamilton Co's., of Peterboro', and others without number, speak of Copperline in the highest terms. In fact engineers from Quebec to New Westminster yearn for Copperline, and Mr. Spooner is rapidly developing a business of large proportions. For heavy journal bearings, crank pins, steam boats, saw mills roller grist mills, planing mills, and in all good machine work, Copperline can be strongly recommended. The metal can be shipped from Toronto, Montreal, Winnipeg, and from the patentee, Mr. Spooner, Port Hope.—Bobcaygeon Independent.

The metal can be shipped from Toronto, Montreal, Winnipeg, and from the patentee, Mr. Spooner, Port Hope.—Bobcaygeon Independent.

Perhaps you don't know what Spooner's Copperline is. Perhaps you think it is a new cure for rheumatism, or a temperance drink, or a comforter for teething children, or a patent affair for keeping your feet dry, and turning your pedal extremities into galvanic batteries capable of melting the gold around your store teeth with magnetic currents. Well Spooner's Copperline is nothing of the kind, it is a purely non-fibrous, anti-friction metal, for use by engineers in fitting axle boxes. The great difficulty in all machinery is to keep the axles from heating. Brass, bronze, and labbit metal are used, but all have more or less friction which engenders heat, and if there is one thing in this life that amuses an engineer it is a hot box. It is not necessary to be an engineer to be acquainted with the peculiar merits of a hot box, but there is nothing will make an engineer so fully appreciate the beauties of a humble, lowly Christian spirit as to have an axle everlastingly tearing itself to pieces, in a red hot passion of fury. Now Copperline is a metal patented by Mr. Spooner, of Port Hope, which cannot by any means be induced to a glow of warmth. Its coldness would give the chills to charity. To nail a box with it, is like a visit from your wife's most estimable male, the axle has to hustle for all it is worth to keep from freezing. This metal is now being put up in handsome stenciled wooden packages suitable for counter display, and no hardware store claiming to rank above a tin pot concern can be without a stock. The Georgian Bay Consolidated Lumber Co., the Rathbun Co., the Wm. Hamilton and Peter Hamilton Co's., of Peterboro', and others without number, speak of Copperline in the highest terms. In fact engineers from Quebec to New Westminster yearn for Copperline, and Mr. Spooner is rapidly developing a business of large proportions. For heavy journal bearings, crank pins, steam boats, saw mills roller grist mills, planing mills, and in all good machine work, Copperline can be strongly recommended. The metal can be shipped from Toronto, Montreal, Winnipeg, and from the patentee, Mr. Spooner, Port Hope.—Bobcaygeon Independent.
