They white tusks gleam fiercely, and, lifting appeared to be content with the retreat of their great heads high out of the water, the invaders. dashing the foam away from their breasts with their swift motion, they rush upon you in a mass. If one gets his tusks over Thirteen waggons loaded with gold are on | the gunwale of your boat your life is worth their way from Siberia across the Ural exceedingly little. A walrus weighs nearly a ton, and he is as strong in proportion. He may either tip your boat over or punch a hole through it with his tusks; in either case you would fall into water so cold that you would not be able to survive five minutes, even if the walrus did not attack

Flight from the charge is impossible; the walrus can rush through the water much faster than you can row. Your only safe course is to shoot the leaders of the herd. Then the rest are encumbered by the helpless bodies of their comrades lying upon the water; the charge is broken; the walrus

There is a mass of heads wildly bobbing with one accord and flee.

That is their method of fighting when they are assembled in numbers. When only two or three are gathered together they lack the confidence for a charge, but they pursue tactics that are just as exciting to these against whom their fire is kindled. They lift up their heads afar off, and gauge the distance between themselves and your boat. Then they dive with much ungraceof broad hind flippers. The interval during which they are under water is not pleasant for you. Fortunately they do not

And you must be quite ready to shoot it Paris fashion makers have decreed that with great promptness or it will disappear incident happened to us in our first walrus fight. Fortunately the walrus changed his mind about tipping the boat over and contented himself with raising one end of it on high and sliding out from under it. For his pains he was instantly shot and harpooned. I think there is no one who was in the boat will soon forget his sensations as it be-

gan slowly to rise out of the water. We had five walrus hunts, and every member of our party, I think, brought on board the Kite at least one walrus head to A rescue party succeeded in saving the bis own rifle. Of all the five the most inan hour or so after the first fight was over for the Academy of Natural Sciences. Two The Budget Committee of the German of the members of the party had been in the when a black body was sighted upon an 10e boat and, with one of the ship's crew, started off after the animal.

Threading their way among the countless small floes that are thrown off from the edge of the main pack and upon which the walrus lie, they came to the spot where the black thing had been seen. But there was no black thing there; it had been, not a walrus, but a seal, and seals are wary. Three more disappointed men Greenland did not contain. They held a council; should they go back to the ship or not? A fog was coming up, forming a gloomy back ground to one huge berg of a ghastly white

hue that was aground near by. Fogs are even more dangerous in Green-According to recent information received | land waters than elsewhere, for the echoes in San Francisco, a revolution headed by from the ice make it impossible to follow foreigners, presumably Americans, had a distant signal. A sudden noise decided broken out in Honolulu; the Queen, after a the hunters; there was an unmistakable feeble resistance, had retired to her country walrus bark over by the berg. Silently Mr. Blaine left a will bestowing all his residence, and a Committee of Public Safety but swiftly the sailor skulled the boat towas formed, of which commissioners were ward a dark spot that now was visible on a sent to the United States to request the floe. As the impartial person of the three, It is now estimated that the deep water annexation of the Hawaiian Islands to that he was to give the word to fire. The walrus the three shots rang out together. Nothing could have been neater. The walrus dropped

instantly and lay dead upon the ice pan. Usually the slain animals slide from the ice and then you must harpoon them at once or they will sink. To tow it to the ship would be impossible, for young ice was forming a quarter of an inch thick, and it was hard work to send the boat through without half a ton of extra weight dragging astern. The sailor solved a problem by taking up an ax that lay in the boat to be used in rebuking such walrus as should impertinently put their tusks over the gunwale, and cutting off the animal's head. That was a trophy for one man. The hunters wanted one apiece. There were more walrus on cakes ahead, but there were also more gathering in the water to avenge the death and decapitation of their friend.

They were swimming about in twos and threes and stretching their long necks high out of the water to see where the foe was lying. The prospect looked ticklish. But gradually the men worked the boat within range of a floe upon which two great bodies were lying. One, a magnificent gray fellow, raised his huge head. It was too much, the sailor sculled rapidly around into a good position, gave the word, the reports more shots and he lay helpless on the ice. His companions disappeared, as they usually

do at the first discharge of a rifle. The men bent to the oars. As they drew near the floe they saw two helpless baby walrus lying by the side of their dead father | ed from the eyebrow.

on the ice. At that moment there rose over the opposite edge of the ice the head and shoulders of the mother walrus. In the teeth of the approaching boat she advanced, took A member of the Peary relief expedition, her offspring upon her shoulders and swam

The

There is an important lesson in the fact that another of the leading railroad companies of the United States has discharged all men of intemperate habits in its service, and announced that it will not hereafter give employment to such persons in any capacity. Tais rule is observed to a considerable extent on both our great Canadian roads, the Grand Trunk and the Canadian Pacific, particularly with reference to employees engaged in the operation of trains; ety will be generally insisted upon as a condition of securing any kind of a position in the railroad business. This is not because the railroad corporations are devoted to the conservation and promotion of moral interests as such, but because they find it most advantageous to have their work done entirely by men who abstain from the use of liquora Experience has shown them that employees who are given to "fanning the flame of friendship with the wing of conviviality "can not be depended upon for the and thus a practical reason of conclusive such a way that the state tax will amount force, apart from all considerations of principle and sentiment, is furnished for preferring persons of different tastes and tenden- ed to own and operate nineteen and one-half cies. The habitual drinker may be a man ful exhibition of a black back and flopping of intelligence and integrity, and yet not pays eight and one-half per cent; it is anbe trustworthy in relations and contingencies | nounced that they hope soon to establish a of serious moment. He is not the master | universal penny fare. of his faculties, but is at the mercy, more or less, of an insidious and demoralizing influence. It is not the railroad corporations alone

that are adopting the practice of discrimination against men inclined to dissipation. There is a general drift in that direction in all forms of business. It is not easy for a man to get employment anywhere without giving satisfactory assurances of temperate habits. That has come to be one of the best recommendations that he can bring; and in its absence, other qualifications do not count as he thinks they should. The records of defalcation, of coatly negligence and of annoying mistakes are largely traceable to the frequenting of saloons, and employers understand the fact so well that they are constantly on their guard against the danger which it represents. They may not be temperance men in the strict meaning of the term; but they have learned that it is necessary to have sober men in their service if they expect their affairs to prosfault was tolerated in employes so long as they seemed to be industrious and faithful; but nowadays it is looked upon with disgreat change has been gradually taking place in the views of all business men upon the subject of tippling, not because of the look at the matter in the light of self-interest, and their good sense tells them that but really indispensable.

The lesson is one that young men can not afford to disregard. It is to the effect that promotion and pronounced success, they must keep away from the saloons and establish a reputation for temperate habits. They may not see any harm in what is called moderate drinking, but other people do, and those other people include the employers whose good opinion is a source of direct and positive benefit. It is a great mistake to suppose that the best situations can be secured or retained by men who are known to be addicted to the use of liquor even in a casual way. Total abstinence is the only wise and profitable practice in the case, and no man is able to do the best for himself by any other. It is one of the recognized tests of fitness for places of trust and responsibility. The prizes in busines are not for the dissipated, however bright and energetic they may be, but for those who resolutely shun even the appearance of a fondness for strong drink. It pays to be sober, in short, and that is an argument of practical force which is unanswerable by any sort of reasoning. The moralists are not always listened to when they talk of the evils of intemperance, because they are too apt to dwell upon the emotional features of the matter and to overlook those of a more rational and effective nature. There can be no doubt about the fact that sobriety is a surpassing advantage from a pecuniary point of view; and thus the logic of business is in reality one of the strongest influences in favor of the temperance cause.
