# AGRICULTURAL.

A Cheap Farm Barn.

Our illustration is of a farm barn adapted to the needs of a small farmer who keeps a fow cows as well as horses. It may be made 30 ft. long, and the main part 20 ft. wide. The annex or shed can be divided up into stalls for cows, and compartments for the calves, brood sows or ewes This part has no mow. The main part has a row of

A CHEAP FARM BARN.

stalls along the ourside for horses. O' the side next the annex or shed are arranged harness rooms, feed bins, etc., as may be front of the mangers. As shown in the ilbe put up for \$350 or \$400.

### Education Required to Farm.

No work or industry requires as much edu- unite crosses that are in harmony, and has good cream cans. cation as farming. I may define education | a certain type in mind and is breeding under two heads, viz., artificial, that is from | towards it-creating a new breed, so to | books, and practical, that is from practice speak-with as much care as would be or experience. We need both, and lots of taken in maintaining excellence in cattle questions does the farmer have to answer? | bloods succeed and maintain qualities that Did you ever think of this? Is there a man | will not retrograde. The fault with the in any industry that has as many questions to present common stock of the country is answer for himself? Let us look at this for a | that they unite too many bloods already, moment. All farmers have more business and the mating was, and is not being done transactions than they can fully remember | with a strict view and purpose, guided by hencesome kind of a book must be kept. It knowledge of uniting the best qualtities, must be kept in such a way as to answer in | and the result has been that undesirable case of a dispute in law. Every farmer has things have obtained equality, often masmore or less checks, notes, letters, etc., to tery, and the common cow of the country write, so he must be a penman in order to is a failure because of this blending of too keep his books and do his writting. He many desirable qualities; in fact, the virmust be a good mathematician to figure tues of stamina and vigor have the mastery commercial world. He must be a gram- great a measure. Mixing the pure bloods marian, in order to write and speak for his of the breeds is, in fact, a compromise at own in public places. He must be a politi- best, and only the wisest of breeders can cian, in order to understand governmental make progress by its practice. Better by affairs, and hold the agricultural interests far, we think it preferable to grade up the and commercial matters, especially markets. blooded stock we now have by frequent Thus you see the farmer must answer for change, with the view of uniting the best every point of school education. But this qualities of several breeds. is not half; he must study the markets, and know just when to sell each thing; when and where to buy articles he needs; what kind of implements are the best for his particular use : what breeds of hogs are the best, how to keep them healthy, and a hundred other questions are brought for him to answer; likewise with cattle, horses, sheep, poultry, bees, grains, and in fact there is a sufficient amount of study in each individual division of agricultural pursuits, to keep any man or woman in honest, honorable toil from the cradle to the grave. true, they can, with misery to themselves, to their neighbors and to their stock.

I feel safe to say that no one can make a very great or the best result in farming, by trying to "do it all." That is, trying to raise everything. This many times turns to nothing in the end. Every person has an ideal, or rather something on the farm that they like most. Some fancy the cows; they like to feed and handle cows; they delight in making the cows look well, and just put such great attention into the cows that other things are neglected. Suppose such a farmer would quit raising much of anything else but cows, just devote all his time to dairy work ; he would study, read and write about cows and their products, and watch the markets. Do you think he could find enough to do; and do you think he could make any money at such work? Of course, there is no question about that. But suppose that man would try to raise hogs altogether? Would he make as much money as he would with his cows? No, never. But over there is a neighbor that just thinks hogs are above everything else; he keeps cows, a few for family use, but his best time is devoted to his hogs; he reads and writes about them, he watches the markets and is just doing well. Sup pose he tries to raise cows, and nothing but cows, what will be the results? A complete failure. I might compare every branch of agriculture in this way, but you plainly see the difference, hence I will go no further.

cation have its course. No man can learn a trade from a book ; he must have practice, as this is nature's mode of education. Whoever you are, or wherever you are, you have some particular industry which you fancy. Take that for life's job. God has one universal programme, made and printed on "the pages white and fair," and upon this programme is everybody's name, and as I think of this I imagine something for everybody to do, just opposite their name. fear God." Is this not sufficient proof, readily from some cows than others, and that any true person that "fears Him" will cows are found, that. making butter from be crowned with success? Whatever your | their milk and cream is impossible, while "fear Him." Farmers need this, especially | it high heat. It is asserted by some of the so they need Divine education, practical experts, that the globules of fat vary in education and artificial education. From a watch tower in the fort at Peshawar one sees the valley of the Kabul River which is the only opening in a circle of mountains surrounding the spacious plain. Opposite is a semi-circle of black, ragged hills, about fifteen miles away, seeming to rise straight up out of the plain and shut it in like a wall. No outlets are visible, but to the south is the Kobat Pass, to the west the Bazaar Valley and the Khyber, to the right of which the Kabul River issues from the mountains. The flat ground beneath is British territory; but the mountains all round are Afghan. Here in the plain the Queen's peace is kept; there in the mountains live Pathan tribes who acknowledge neither Queen nor Ameer It is the edge of the Empire.

These Khyber Pathans, living in mountain fastnesses from 5,000 to 10,000 feet high, exist partly by levying toll from all who go through the Pass; and they regard these dues as a traditional, inalienable right. During the first Afghan war they took rent in lieu of Pass dues from the British, and caused trouble only when they increased. A corps of troops called

# THE KHYBER RIFLES

sort of respect for British authority.

British engineers have made the Khyber Pass an excellent roadway, but in a military sense it is still difficult and dangerous. The solution of the great problem how to subdue the tribes and bring India and Kabul into accord is thought to be the locomotive, and already the Khyber country has been reconnoitred for a railway line from a fortified position on the hills to Peshawar. It may be that these preparations for the defeat of mountain difficulties and the circumvention of the Pathan tribes has aroused a resentment, which finds expression in acts of violence, such as the burnings described in the despatch. To such cause is the at- | United States now aggregates 100,000,000 tack more probably attributable than to the | tons annually. stolid demeanor of that portion of the Peshawar people who are sullen but undis-

> The recent statement that all avenues of escape for these defeated natives have been cut off is not quite accurate. More than once the Matabeles have crossed the thirsty but not impassable plains to the Zambesi in the northwest. That route is open to them now, and it will not be surprising if in a short time it is thronged by thousands of Matabele warriors, women, and children of

> If they escape to the Zambesi instead of being forced by the British to settle down in some corner of their old domain, a humbled and a subject tribe, a question will

#### WHITE MEN IN AFRICA.

Few blame the British South Africa Company for taking up arms against the Matabeles. The war was not of their seeking. They were forced into it by the natives who, in their ignorance, thought they could conquer the whites as they had the Mashonas. But if the issue of war forces the natives to the Zambesi, and they fall as they certainly will if they flee at all, upon the Barotse nation, will not the British be morally responsible for the protection of this great Zambesi tribe?

The only outlet for the Matabeles is straight to that part of the Upper Zambesi Valley where King Lewanika rules the Barotse. These natives are not admirable milk producing animals are much better their shops or stand in the street give you a in their history or their characteristics. They inhabit the large region where they conquered and almost exterminated the Makololos, who had just helped a humble missionary to cross the continent on that journey which made the name of Livingstone known to all the world. They are great slave raiders, and are a terror to the surrounding tribes. But they are no match sympathy now, for progress toward better things is apparent among them.

It will be no trifling matter to see the

Eighty years ago a great Zulu band, defeated by a faction of their own people, retreated far north, across the Zambesi, to the Lake Nyassa region, where they scourged the country far and wide, and are topoints where growing white influences have erected effectual barriers against

The Matabeles are the brothers of the Angonis of Nyassa Land. Their fathers fought side by side in the battles of Chaka who made the greatness of the Zulu nation. It will not be an edifying spectacle if the Matabeles, driven from their homes, like the Angonis, are now permitted to begin a new career of murder and rapine on the Upper Zambesi.

The whites have saved the Mashonas and the Bechuanas from future raids like those which have decimated them in the past. The Matabele question should be settled on their own soil. It seems to be the plain duty of the British, whose growing empire in South Africa has precipitated this war, to exert every energy to keep these defeat. ed Zulus in some district of their present territory, under restrictions that will make them harmless.
