VEGETABLE SOUPS.

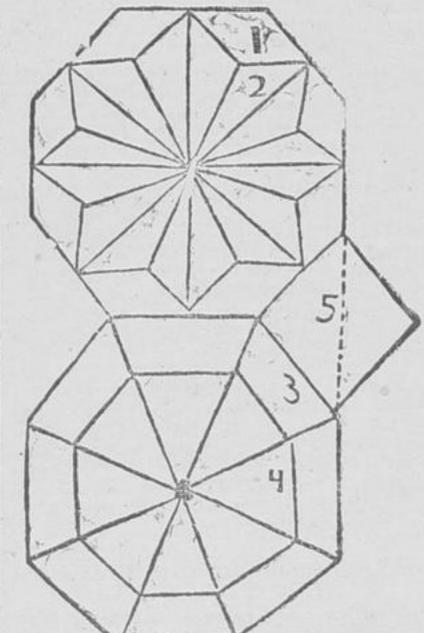

A large proportion of the soups in daily use in the French household, says an exchange, are made without stock, but of vegetables simply boiled to a puree in water and properly seasoned. At the head of this list of maigre soups, as the French call soup made without meat, is Julienne.

Take two small carrots, one turnip, Our reports this week from the New one leek, one onion, a quarter of a head of fine young cabbage, and a quarter of a head of celery. Clean all these vegethe low prices now realized for farm tables, wash and dry them. Cut them into little shreds, about the size and shape of matches, but not over two inches long. On account of construction of the onion it is not possible to cut it on exact straight lines, which are considered the proper shape for this soup, but it should be cut as near the tables as dry as possible. Melt four tablespoonfuls of butter in a hot saucetil they are slightly brown. A quart of the water in which peas or beans have been boiled should then be seasoned with salt and pepper, if it is not so seasoned already. The fried vegetables Leaders of the cholera riot at Cairo should be added to it and the soup should be allowed to slowly simmer for three hours, when a handful of chopped sorrel or a teaspoonful of minced cheese or a handful of minced lettuce leaves should be put in and the soup served at once. You may add little squares of bread properly browned in the oven. This soup will be a great stock or consomme in place of water. In this case it is made in exactly the same way, except that the vegetables are cooked for thirty minutes after add-

ing them to the stock. An onion soup is one of the best vegetable soups we have. Fry four onions, cut in thin slices, in two heaping table-A national Committee has been form- spoonfuls of butter, or even in nice fat ed in Athens to assist the Cretans who Stir the onions continually while they are in rebellion against Turkish rule, are frying, and when they are quite brown add a scant half cup of flour. WASHING THE DISHES.

There is a right way and a wrong The late Baron Hirsch once rented way to do everything it is said, and led. from the very monotony; therefore such work should be performed in such a you have ceased to want it.

manner as to consume as little time and strength as possible.

To begin with, it seems in order to state that this is no little girl's work. In many families this work is often made the work of the children before they are of a suitable age or size to perform the work properly. It is work which requires no small amount of patience, as well as good judgment, and women who must perform their own housework have no right to shirk this which they find so distasteful, but seek rather to make it as nearly pleasant as possible. That it may be done quickly and thoroughly, one must prepare for it before beginning. Have plenty of hot water, soft if possible, and plenty of clean dish towels. A leaky pan may be easily converted into an excellent drainer by punching holes in the bottom, as many as desired. All sticky dishes should be dipped in water and set aside. Fill the dish pan half full of water and the drainer placed in a pan also half full of very hot water. Wash glassware first. When the drainer is full, lift from the pan and place the pan upon the stove to keep hot, and wipe glass upon very clean, dry towels.

Knives, and forks, spoons, etc., come next, the china, tin, and last ironware. When all dishes are wiped place towels in rinse water, wash well with soap, rinse and hang in the open air to dry; dish-cloths should be treated in the same way, and will always be found sweet and clean.

Dishes should be washed on a table or shelf, never in an iron sink, thus less being continually discovered. preventing the chipped dishes which often disfigure an otherwise faultless

TRIFLING WASTES.

Much waste can be traced to slight neglects like:

The open tea and coffee canisters. The soap left to dissolve in water.

"I was completely out of my depth, when I heard a quiet laugh behind me, and, on turning, I found it was my instructor, who held up his right hand, and the two men disappeared, the stick resuming its place in the veranda, and to crown all, there was not the slightest sign of any water, having been brought in. I excitedly appealed to him for an explanation. He said that he had been present all the time, having willed that he should be invisible to me; also, that I should imagine myself to see and do what I thought had taken

place. "In order to prove it, he asked me to step out into the compound, and directed my attention to a huge cavern, which I knew was not there before. As I entered it, a number of huge elephants and camels issued from it in a continuous stream; yet I could not touch one of them. They apparently passed over me, as though I did not exist. He again raised his hand, and the cavern and animals disappeared, and there was no indication of any exodus of any kind."

THE WRONG FUNCTION.

Snobson-I feel dweadfully. I gave Mr. Andrew Lang, perhaps the greatan at home yesterday and only ten people came. Quiz-Why don't you give a funeral? You'd have it crowd-

A CLEAR VIEW.

Papa, what is posthumous fame?

GOLD IN NEW SOUTH WALES.

New Fields Opened and New Methods of

Mining Adopted. The glamor surrounding the earlier discoveries of gold in Western Australia has naturally diverted public attention from the fact that the auriferous output in New South Wales has been steadily increasing of late years, the quantity obtained in that colony during the past year being 360,016 ounces, being the largest annual yield since 1873, when the quantity was 361,-784 ounces, and surpassed only in eight years since the discoveries of 1851. The output of gold during the present year is expected to show a further in-

crease. In fact, it is now generally recognized that instead of the auriferous sources of the colony being comparatively exhausted, as supposed by many, they are only just beginning to be property developed. Although the alluvial deposits discovered in the early days have been practically abandoned and are popularly considered as worked out, there is ample evidence that the surface of the country has been merely scratched. The search for gold has been vigorously prosecuted for more than forty years; but new gold fields and fresh deposits are neverthe-

Improved methods of extraction have been invented, and

A RICH HARVEST

awaits the skilled miner who shall bring to bear upon the development of this industry modern knowledge and appliances such as are being successfully employed in other countries. Gold The wrong use of napkins, towels and is also found in quartz-veins, occurring in older and metamorphic rocks, The potatoes and vegetables left to such as argillaceous states, chloritic and talcose schists, as well as granite, di-The tin vessels corroded with vine- orite, serpentine and porphyry. Vein gold is associated more commonly with The cheese left to mould or to be iron pyrites, though found with copper, fead, zinc and silver ores, and also in asbestos. But the extraction of gold from quartz-veins requires the erection of extensive machinery and gold-saving appliances, involving an outlay of capital such as the ordinary miner seldom possesses. Quartz-mining is generally carried on by limited liability or no liability companies, most The spoons which scrape the kettles of the capital being found in the colonies. The principal quartz-veins are So there are many trifling wastes situated near Armidale, Bathurst, Hill which greatly swell the aggregate and End, Orange, Barkes and Wyalong. The should be feared as the "little foxes districts which produced the largest quantities of gold during 1894 were: Orange, 36,208 ounces, nearly all from Lucknow; Cobar, 18,524 ounces, of which 7,796 ounces came from one mine, situated at Mount Drysdale, and discovered in 1893; Hillgrove, 21,050 ounces, and Hillgrove West, 10,318 ounces; Peak Hill, 12,231 ounces; Parkes, 9,745 ounces; Wyalong, 9,649 ounces; Adelong, 6,356 ounces; Fairfield, 6,062 ounces; Mudgee, 5,373 ounces, and Wellington (Mitchell's Creek) 5,208 ounces. Besides the Mount Drysdale gold field the most important find of recent years was made at Wyalong, in the Lachlan district. The first prospecting claim on this field was registered on the 26th of December, 1893; a great rush at once ensued, and in the early part of 1894 tricks. He said it was all imaginary there were probably more than 10,000 on the part of the spectators, as he persons on the ground. At the end of 1894, the adult population, within a five-mile radius of the Wyalcing Court House, was estimated at 3,825 Western nations, was too animalized, males and 930 females. The number of the year, was 900, of which about 300

ANOTHER NEW FIELD. he gave for my amusement was the was discovered during 1894 at Garangconverting of a bamboo stick into a ula, near Murrumburrah, which is said native servant, who waited at table and to have yielded about 2,400 ounces. At Yalwal, in the southern district, one mine yielded 4,000 ounces for two "Afterwards-in his absence-I tried months' work, while the richest mine was lying idle owing to litigation. It may be mentioned here that the Broken Hill Proprietary Company, during 1894, saved 4,079 ounces of gold from verandah with water from the well in their silver lead bullion. The principal seats of alluvial gold mining are the Bathurst and Mudgee districts, and the country watered by the various feedoverflowing, I requested him to stop. ers of the Upper Lachlan, and also in the Tumut and Adelong and Braidwood districts. In 1880 the Temora gold fields, in the Murrumbidgee diser, until, in my excited imagination, trict, about thirty to forty miles from it seemed that the bungalow would be the inland town of Wagga Wagga, were discovered, and were for some Finding that I could not arrest or years in a flourishing condition. The district is now drifting from mining me as though I did not exist, I drew into an important agricultural settlemy sword and lay in wait for him. ment. In the north of the colony, in the New England district; on the coast, in the country of Gloucester; bringing in the water, neither of whom and in the extreme northwest, at Mount Poole, Mount Browne and Ti-

were being worked, 121 had been sur-

in the New England district; at Kiandra, on the southern tablelands, where extensive reservoirs have been formed, and the face of the rocks attacked in various places; at Nelbothery, near Bombala, where the Delegate River Hydraulic Sluicing Company have erected machinery capable of lifting 4,500-000 gallons of water to a height of 330 feet in twenty-four hours; and in the Shoahaven Valley, where large sums have been expended by companies in endeavoring to bring water to bear for sluicing several promising beds of alluvium. The great features of gold mining enterprise in New South Wales is the business-like character with which it is generally conducted, and the permanent nature of many of the reefs. Discoveries of a sensational kind may be few and far between, but the greater number of mines give the holders a fair profit on the cost of working, and even where losses are incurred they are seldom of a serious character.
