# Spark Plugs [Airplane Type] instead of

The new "Twin Ignition" motor, in the new Advanced and Special Nash "400" models, is a truly amazing development in power.

It is a high-compression motor, with two ignition coils, instead of one, two spark plugs per cylinder, instead of one, 360 sparks per second at top speed, instead of 180, to thoroughly and economically burn the highlycompressed gases.

It sets a precedent in motor-performance among all motor cars.

Nash "400" Advanced Six models are now capable of 75 to 80 miles per hour with no effort at all.

Nash "400" Special Six models do 70 to 75 with consummate ease.

Another major advantage of the "Twin Ignition" motor is economy -more power, more speed, less gasoline.

Drive a new Nash "400" and you'll see what Twin-Ignition and high compression have done to give the world a new and finer motor car.
