WEEKLY NEWS NOTES FROM THE UNIONVILLE DISTRICT

Local citizens support very strongly the proposed action of the Markham Township council to take steps to slow down traffic through the village. The reckless driver is a menace to the Public Safety and any steps to rid the community of the nuisance of irresponsible drivers tearing along our streets at dangerous speed will be welcomed by law-abiding citizens.

We welcome the announcement elsewhere in this issue that the Agricultural Short course will be held in Unionville this winter. We hope that many of the young men and women will take advantage of the opportunity and that the course will be successful. It will be held during the month of January in the Township Hall and there will be a class for young men and one for young women. There will be two lectures every day and it is understood that special attention will be given to poultry and gardening.

Work is progressing on the erection of the new sheds at the Township Hall. The men are busy building the foundation and the erection of the shed will be completed this fall.

HEALTH SERVICE OF THE CANADIAN MEDICAL ASSOCIATION

APPENDICITIS

Appendicitis is a public health problem because the public need to be told of the early symptoms so that they may promptly secure proper treatment which will greatly reduce the present death-rate from this disease.

In the majority of cases, appendicitis causes a condition that a physician will readily diagnose. Pain towards the centre of the abdomen, followed by nausea and vomiting, is usually the first symptom. The pain varies in intensity; it may be of a gripping character. Later, the pain usually moves to the right lower part of the abdomen, and the abdominal muscles in that area become hard and tense. This is nature's effort to protect the inflamed part.

When any person—child or adult—has pain in the abdomen, even when the pain is not accompanied by nausea or vomiting, the family physician should be sent for at once. The only satisfactory treatment for appendicitis is operation. The chance of recovery

practically depends upon the interval of time between the onset of symptoms and the operation. To delay in securing prompt treatment is to gamble with life itself.

There is one thing in particular that will do a tremendous amount of harm and that will, in many cases, greatly lessen or take away the chance of recovery, and that is the use of a purgative or laxative.

No person, when suffering from abdominal pain, should not take or be given a purgative or laxative unless ordered to do so by a physician. The loss of bowel movements is not going to do any harm, whereas the activity stirred up by a purgative, when nature has kept the bowel quiet on account of an inflamed appendix, may be disastrous.

Abdominal pain is sufficient reason for calling the family physician. Questions concerning health, addressed to the Canadian Medical Association, 184 College Street, Toronto, will be answered by letter. Questions as to diagnosis and treatment will not be answered.
