What TWIN IGNITION Does

THE New Nash Twin-Ignition motor has two big aircraft spark plugs for each cylinder, instead of the ordinary single plug, as you can see in the simplified diagram above.

Both plugs fire simultaneously. The gas vapor is ignited at two points instead of the usual one. One effect is quicker combustion, which produces more power, more speed, much faster acceleration.

Another result is, more uniform combustion, which helps to create the very noticeable smoothness and rhythm of Nash motor performance.

And still another result of Twin Ignition is more efficient combustion, which prevents wasted fuel.

With Twin Ignition, instead of single ignition, higher compression is practical, and the same Nash motor produces 9 1/2 more horsepower, 5 miles an hour more speed, and 2 extra miles from every gallon of gasoline you buy.
