NEWS AND INFORMATION FOR THE BUSY FARMER

Straw as an Absorbent
Straw when used as bedding for live stock will absorb from two to three times its weight of liquid, and if finely cut will soak up about three times as much liquid as when uncut. Further, the absorptive capacity of dry sawdust and fine shavings is from two to four times that of ordinary straw.

The Spring Seed Requirements
Farmers who desire to assure their seed supply at minimum cost are already taking stock of their spring requirements. Those who have seed of their own will be taking steps to have it properly cleaned and graded before the spring rush. Others, less fortunate, will be well advised this year particularly, to secure what they require as soon as possible, making sure that they are getting varieties which are most highly recommended for conditions such as theirs.

Buy Feeds on Guarantee
Do not find yourself with a "gold-brick" feed, money spent and no value in return. Oat feeds analysed in the laboratories of the Dominion Experimental Farms have had a range from 4 to 14 per cent. of protein and from 10 to 30 per cent. of fibre, meat meals of from 40 to 65 per cent protein and phosphoric acid from 10 to 20 per cent. Therefore do not buy your feeds blindly but study the guaranteed analyses, as printed on bags or other containers so that you know of what value the feeds are for your specific purpose, and also as compared with other feeds of the same class.

Help to Make Canada More Beautiful
The unlovely things and unattractive places in Canada that displease

the eye are made by man. It is time he set out to undo some of the damage that has been done. There are prime-rose paths for all to tread who care to make them. An amazing amount of worry can be spared under along those paths in a bright spring afternoon. Since Adam tilled the first garden many pastimes have come to claim their thousands but have passed out of the picture while gardening has stood through the centuries. There must be something in it. Buy some flower seeds, plant some flowers or shrubs this coming spring. Help to make Canada more beautiful.

Grain Feeding
In all grain feeding it must be kept in mind that the product being used is an expensive one and can under no circumstances be used in the feeding or finishing of low grade or indifferently bred animals. Not only must the animals be of approved types, but experience has clearly shown that certain kinds of farm animals greatly excel others in their ability to utilize the feeds provided. Especially is this true in connection with the feeding of grains. Poultry would probably head the list in this regard, with the pig standing a close second in its ability to manufacture feed grains into meat economically. The dairy cow, because of her ability to give off from her body immense quantities of milk during a long lactation period, would rank third, followed by beef cattle and sheep.

Weeds in Cereal and Grass Seeds
With reference to weed classification and seed grades under the Seeds Act, weeds are classified into three groups according to the seriousness of their character. The first group consists of primary noxious weeds, the nine members of which are couch grass, bladder campion, dodder, field bindweed, Johnson grass ox-eye daisy, perennial sow thistle, white cockle and wild mustard. The second group is known as the secondary noxious, which includes ball mustard, blue weed, Canada thistle, chicory, field peppergrass, cow cockle, darnel, docks, false flax, forked catchfly, hare's ear mustard, night-flowering catchfly, purple cockle, rag-weed (common, great and perennial), ribgrass, Russian thistle, stikweed, stink-weed, tumbling mustard, wild carrot, wild oats and wild radish. The third group contains a long list of lesser weeds such as catsnip, lamb's quarters, cinquefoil, etc.

No seeds of group one, primary noxious weeds, are allowed in grades No. 1 and No. 2 for seeds of cereal and other field crops, but allowance is made in grade No. 3 of cereal and field crop seeds for five primary noxious weed seeds, or 15 primary and secondary weed seeds combined, of all kinds and 300 seeds of other cultivated plants per pound.

No. 1 grade for seed of clovers and grasses allows no seeds of primary noxious weeds. No. 2 grade allows five primary noxious weed seeds per ounce or 20 primary and secondary noxious weed seeds combined per ounce, while No. 3 grade allows 25 primary noxious weed seeds, or 80 primary and secondary noxious weed seeds combined, or a total of 500 weed seeds per ounce. The use of seed grain that has not been well cleaned is responsible for the introduction of many new weeds and the increase of those already in the land.

Expression of confidence in a brighter business outlook in Canada, coupled with definite improvement in conditions throughout the Dominion, was made recently by H. J. Humphrey, general manager, Canadian Pacific Railway, eastern lines, in an interview during his trip of inspection to the Maritime provinces prior to the opening of the winter navigation season.

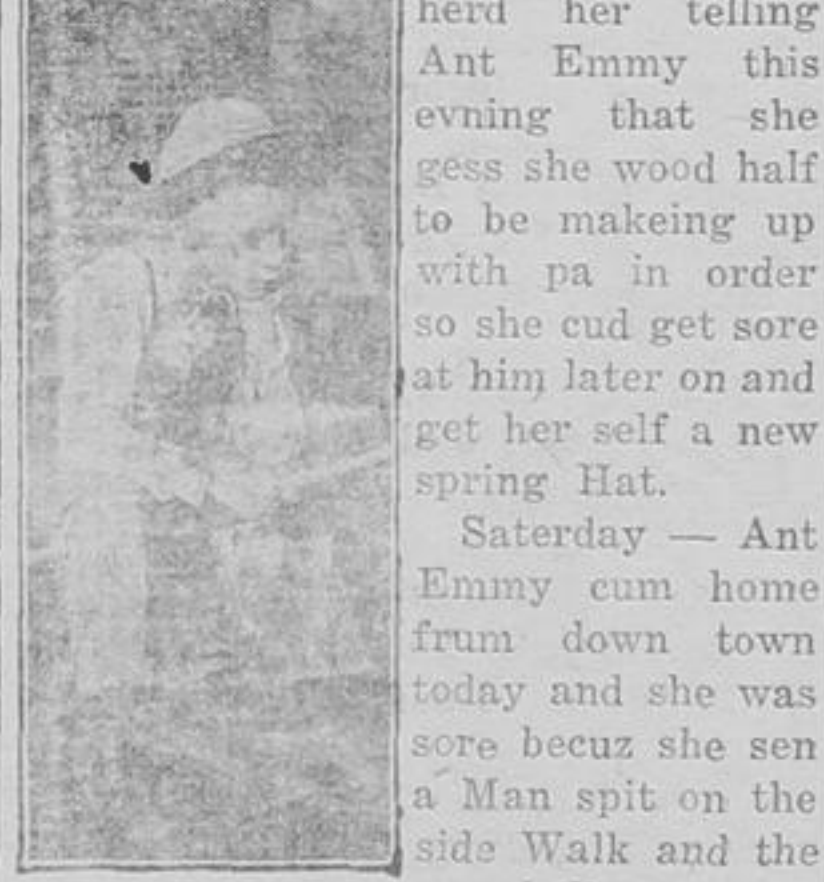

Five ports hitherto not touched at by world cruises — Penang, Straits Settlements; Semarang, Java, Boeleng and Padang Bay, Bali; and Zambouanga in the Zulu Archipelago — have been added to the 1934 itinerary of the Canadian Pacific liner Empress of Britain, sailing from New York January 4. The cruise will cover 133 days and 30,916 miles and will return to New York May 14.

Special low fares with generous time limits for the return trip will be available on Canadian railroads for the Christmas and New Year holiday periods, it is announced by C. P. Tanguet, chairman, Canadian Passengers' Association. These low rate tickets will be good between all stations in Canada and also between points in Canada and certain United States connections.

SLATS' DIARY
BY ROSS FARQUHAR

Friday—well ma has ben kinda mad at pa for a few days ever sence

Wensday but I herd her telling Ant Emmy this evning that she gess she wood half to be making up with pa in order so she cud get sore at him later on and get her self a new spring Hat.

Saturday — Ant Emmy cum home from down town today and she was sore becuz she sen a Man spit on the side Walk and the marshell was a standing in to ft. of him and never a rested him. she says about the only law witch gets informed here is the law of Gravitashun.

Sunday—Hunk Stepp wassent at Sundy Skool today on acct. his sister Mertle boughten sum meat for the dog and it was spoilt and Hunk and his ma both got pritty sick.

Munday—I gess Mame Tuttle will get put out of the Spinsters club becuz at there meeting today Miss Matty Evans purposed a slogan witch was Long Live the Spinsters. and Mame piped up and sed. Why.

Tuesday—Ant Emmys sister cum to stay for a few days at are house and she is a offle tawker. At breakfast pa started to tell about sum thing witch happened at the office yesterday and the 1st chance he had to Finish it was tonite. she went to sleep wile the Radio was a playing musick.

Wensday—Mr. Gillem told Mrs. Gillem last Munday that if his stock went up they wood go to the see shoar for there vacashun. Mrs. Gillem told pa they was agoin to drive over to the next county to see there cuzzen for there vacashun.

Thirsday—Freda Cross cum up tonite and just as We was redy to lissen to Rudie Valley why she dissided to sing Avva Marie. well I mite of Xpected it becuz I walked under a Ladder today just as a Black cat erost my Path to.

ONTARIO LEGISLATURE

Russell Nesbitt, K.C., Bracondale, proposed that building construction should be investigated by the government and teeth be provided in the Act to enforce a minimum wage in the building trades.

Endorsing the Conservative member's suggestion, Dr. G. A. McQuibban, Liberal House leader, demanded that the enquiry take in also the highway construction industries.

The charge was made by Mr. Nesbitt that most contracts on large buildings and construction works are now obtained by construction brokers who farm out the sub-contracts, and make a large commission without ever doing a stroke of the work. Mr. Nesbitt's bill would oblige bulk contractors to state the particulars of their sub-bids in tenders.

It was promised by Premier Henry that an enquiry into mass buying in the construction industry and sub contracting would be launched, and the Liberal House leader and the Liberal group intend to press for the inclusion of highway construction in the investigation.

A great deal of the Liberal ammunition is ready for the Public Accounts Committee which, it is now fairly certain, will soon be called.

Out of this week, also, has come the certainty that the Conservative government are not satisfied with the amount of white-wash applied to the McCaughrin case, and the charge of the former Orillia police magistrate that there is a retarding traffic in legal offices, which are, as Hon. Wm. Finlayson admitted during examination by the Legal Bills Committee, in reality the gifts of patronage. According to the Minister of Lands and Forests, the filling vacancies in his riding go in turn to certain districts. The Government has decided to call more witnesses in the McCaughrin case, embarrassed by the silence of the Liberal members in committee, and their attitude that the explanation belongs entirely to the Conservative administration, since it appointed Magistrate McCaughrin, and, in claiming that he was a failure, leave themselves plainly open to the charge that they not only appointed an incapable man but kept him in office for six years with the power of sending men who appeared before him to jail and prison for terms up to ten years.

GRANT FLEMING, M.D., ASSOCIATE SECRETARY

WHY BABY CRIES

"I want what I want WHEN I want it" answers the question Why Does Baby Cry? The baby is a self-centred individual, interested solely in having his needs attended to, and in receiving the attention he demands.

Well babies cry, and crying does not do the least bit of harm. Watch the baby sleep and notice how shallow is his breathing. Watch him when he is awake, and you will see that when he cries, he fills his lungs with air, and usually waves his arms and legs so that he enjoys a regular workout.

Some babies cry when they are wet, or if they are too warm or too cold. Every baby cries when he is hungry, because hunger is not a pleasant sensation. There is also the cry of pain. Nevertheless, nearly all his crying is the baby's way of asking for something, or of expressing his feelings.

Babies do not like to be hungry, but they can be trained to wait until the proper time for feeding arrives. To feed the baby every time he cries is to establish irregular habits, and such a practice will likely upset his digestive system, to say nothing about encouraging the baby to cry every time he wakens.

The baby who is picked up every time he cries will soon develop the habit of crying, every time he wakes, until he is picked up. This is not only a trial to the mother, but it is bad for the baby. The baby should be taken up and played with occasionally when he is awake and is not crying. It is from such simple experiences that he will learn to associate the pleasure of being picked up with the times he does not cry.

Mothers are afraid to let their babies cry for fear there is something wrong with the child. If the baby wakes between feedings and cries, his diaper should be changed, a drink given him, and then he should be turned over and left to sleep again.

As the baby grows older, unless he has been properly trained, his crying will become more frequent and prolonged, because he finds that if he keeps on, sooner or later his parents will give in. Sometimes the baby will hold his breath until he turns blue, and he occasionally stiffens out; this so alarms the parents that they take him up at once. This breath-holding spell is a temper tantrum, like the older child's lying on the floor, and screaming and kicking with his heels. There is nothing in this to be alarmed about; the child should be left in his bed and made, in this way, to learn that he does not gain his end by temper tantrums.

It is not suggested that baby should never cry; he will and he should cry, because crying is his only means of expression. If the crying is associated with restlessness, and the legs are pulled up on the abdomen, this likely means that there is pain in the abdomen. Such crying should not be ignored; the mother will come to recognize the difference in the type of crying.

Baby must be taught that he cannot rule his parents by crying, for if he does, it is the beginning of an unhealthy mental development.

GRANDPARENTS BE WARNED!

Because tuberculosis takes the greater part of its toll of human life during the early adult years, we are apt to overlook the fact that there is no period of life which is free from this disease. In one year, in Canada, over 750 deaths from tuberculosis occurred among those over sixty years of age, of which number, just under 300 were more than seventy years old.

It is generally known that tuberculosis is, in most cases, a chronic disease. What may not be so well known is that the older patient, the more likely is it that the disease will be of a chronic type, causing little or no distress, and showing none of the obvious signs which we associate with tuberculosis in younger people.

As a rule, there is some cough and expectation. These older people usually believe that they have bronchitis or asthma, or that they are suffering from a winter cough. They may be thin, but they have likely been thin for years. In any case, some loss of weight is not unusual with advancing years, and such an explanation is accepted. Yet—and this is the important consideration because of its practical significance—the germs of tuberculosis are in the

sputum of these individuals. Grandparents are naturally attracted to their grandchildren, and they delight in giving vent to their affection by kissing the youngsters and playing with them. The fond grandparent, with the germs of tuberculosis in his or her sputum, will, under such circumstances, pass them on to the child.

We are not saying this with any idea of frightening older people into keeping away from children. The purpose is to tell those who are not only willing but anxious to do everything for their grandchildren and other children that, if there is any suggestion of a chronic cough, no matter how long it has persisted or what name has been given to it, it should be looked into because it may be tuberculous.

Of course, while most chronic coughs are not tuberculous, we have to face the fact that some are, and the only way to solve the problem is through a proper medical examination which will reveal the true situation. If tuberculosis is present, then the proper steps must be taken to prevent the spread of infection to the children.

The only satisfactory way to fight tuberculosis is by preventing it. Every case of tuberculosis has contracted the disease from a previous case. Older people may be dangerous spreaders of the disease, because tuberculosis does occur in the older age groups without being suspected, owing to the fact that it may not cause any marked signs or symptoms. This is a word of warning to grandparents.

Questions concerning Health, addressed to the Canadian Medical Association, 134 College Street, Toronto, will be answered personally by letter.

Auction Sale

Farm Stock, Implements, Etc
will be sold by public auction at
Lot 31-Con. 5, MARKHAM
