

INFANTS' COLDS Relieved!

Young children easily catch cold. So Mrs. Russel Ward, of Hilton Beach, Ont., wisely says: "If I notice that there is any sign of a cold I give Baby's Own Tablets and find they are a great help." Thousands of mothers do the same not only for colds but for fretfulness, indigestion, constipation, teething troubles, colic, upset stomach and so on. Baby's Own Tablets are safe and sure in relieving childhood's common ailments. Price 25c.

Nature Builds Your Body—

but you supply the materials.

Health suffers if you run short of iron.

Your food and drink are the only materials Nature gets to maintain bodily strength and well-being. But the tragedy of modern foods is their shortage of iron. Sooner or later this has an effect upon the health. It causes, at first, a run-down condition and simple anemia; then develops into serious ailments, if not checked.

This was shown to be true in a group of forty-five people whose blood was examined by a competent authority. In forty cases the blood was thinner and paler than it should have been, due to the shortage of iron. The authority who conducted the tests recorded the exact amount of the shortage for each person, then put every one of them on a 30-day treatment. The preparation he gave them was Dr. Williams' Pink Pills (called pink because they have a pink sugar coating). In one month he examined their blood again and found that the red corpuscles and the iron had definitely increased in every case.

This test is a demonstration of what this fine old remedy can do for you, if... as is likely... you need iron.

Wouldn't you like to feel really strong and vigorous again? Wouldn't you like to eat well, sleep soundly, take a keen interest in life around you...? Then put yourself on a 30-day treatment with Dr. Williams' Pink Pills. Directly you begin taking this reliable old preparation, the reconstructive process will start. The blood will grow richer... will carry more vitality... and your own feelings will react pleasantly. Old aches and off days will give way to new vigor and brighter outlook on life. You will know once again the joy of possessing that priceless treasure... health! Full size box 50c.

NEWS AND INFORMATION FOR THE BUSY FARMER

Foul Air Checks Laying

One of the reasons many pullets fail to lay well during the winter, in spite of good feeding, is the damp and stagnant air to be found in many poultry houses.

Many poultry keepers close up nearly all ventilators when winter approaches, under the impression that the fowls need the warmth. Fresh air is far more important than warmth, and many batches of pullets that fail to come into production at the proper age are suffering from this mistaken idea.

Birds so affected may not suffer from disease, though they are very liable to colds, but they fail to reach laying condition, and by the time the error is discovered by the poultry keeper the egg market has generally broken.

The best time to test the air in a poultry house if first thing in the morning.

Alfalfa Seed Supply

The alfalfa seed supply in Canada is now regarded as no more than sufficient for seed requirements this coming spring, being somewhat smaller than was formerly expected. In Ontario the 1934 seed crop was lighter than normal. Much of the seed was lacking in plumpness and weight owing to insufficient rainfall during the filling season. This was true particularly of seed saved from the second cutting.

It is fortunate, however, that the supply of Canadian grown alfalfa seed for this spring is sufficient to sow a normal acreage. Alfalfa is becoming more and more popular as a farm crop and has saved the hay situation on many farms where drought would have caused a serious hay shortage if other clovers and grasses had been the only hay crops. Until quite recent years the only areas in Ontario where it was grown extensively were a few of the southwestern counties. It is now common throughout the province and if only hardy seed is used it may be counted upon to thrive in almost any cultivable area in Canada where the soil has sufficient lime content and where good drainage is also provided.

Most of the Alfalfa now grown in Canada is either of the Ontario Variegated or Grimm variety, the two outstanding hardy varieties which have made alfalfa production in Canada both extensive and profitable.

Need Green Feed in Winter

The average farm poultry flock of 35 hens requires approximately one-half acre of greens if the proper amount of green feed during the winter months is provided. As soon as moisture is available to germinate rye, oats or wheat, the planting of either one or all three of these grains to furnish greens for the laying flock during the fall and winter months is advisable.

Green feed is high in vitamins, minerals and proteins, three essential nutrients of a poultry ration, and it serves as a conditioner as well as being high in nutrients. No other one thing will pay as large dividends for the amount of money invested as an adequate acreage of green feed for the poultry flock.

Repair of Machinery

Careful repairing of tillage machinery each winter or early spring with replacement of doubtful or worn parts has been proven to pay large dividends by preventing major costly repairs. Tillage implements generally receive less care and more hard knocks than any other class of farm machinery.

The value of any implement can only be measured by its usefulness in acres covered, quality of work done and freedom from the necessity of costly repairs and delays. Delays due to breakdowns during the rush tillage season of spring and summer are costly and easily prevented if the farmer, with a few tools and a little time, will check over carefully every working or wearing part long before he is going to use the machine.

Check over every machine carefully for loose, worn or stripped bolts; replace broken spring washers and check all loose or slack parts. Wheel and power lift bearings, disk boxings and all moving parts should be adjusted for wear. Clean all working parts of old grease, oil, dirt and steel particles with kerosene and replace with plenty of fresh lubricants.

Current Farm Conditions

Reports from Dufferin County state that feed is the limiting factor so far as the condition of livestock is concerned. There is a large percentage of livestock in that district, however, being carried along in fair flesh and they will be turned on grass in good condition. Many farmers there are feeding cattle for market.
