NEWS AND INFORMATION FOR THE BUSY FARMER

The Measurement of Fuelwood
Fuelwood is sold by the cord or by the wagon box load. A standard cord is a pile of wood 4 feet high, 4 feet wide and 8 inches in length, giving a total volume of 128 cubic feet. The amount of solid wood in a cord varies considerably. Crooked sticks, small diameter of the sticks, loose filling and prominent knots are common characteristics that reduce the volume of solid wood in a cord. It is customary in many localities to sell wood by the short, face or running cord. A short cord of wood is a pile 4 feet high, 8 feet long and 12, 14 or 16 inches in width depending on the market requirements. A standard cord of 4 foot wood is equal to 4 cords of 12 inch wood or 3 cords of 16 inch wood, although a standard cord will seldom give 4 full cords of 12 inch wood because the shorter sticks pile closer.

Tobacco Production
Tobacco production in Canada reached an all time high in 1935. The crop last year amounted to more than 55 million pounds and was 45 per cent greater than that of 1934. The tobacco growing industry in this country has made rapid strides over the past fifteen years, especially in Ontario, where 85 per cent of the crop is produced. Other areas of production are located in Quebec and in British Columbia.

The quality of the 1935 crop is reported as excellent. "With an improvement in general economic conditions and a closer co-operation between growers and purchasing companies in the marketing and production of flue-cured and Burley tobaccos the price situation is much improved over 1933, particularly in Ontario," states the "Agricultural Situation and Outlook" for 1936. Authorities feel, however, that in the case of flue-cured tobacco the probable demand in 1936 does not call for any increase in acreage over that of 1935. Although the acreage devoted to Burley in 1935 was not as large as anticipated, an increase of over 10 per cent in acreage of this type, does seem to be warranted for 1936. Other types of tobacco appear to have reached a satisfactory acreage, based on present consumption figures.

The College Royal Show
On Wednesday, March 4th, 1936, the twelfth annual College Royal Show will be held at the Ontario Agricultural College. Under the leadership of W. C. Keyes, President of the College Royal Executive, this Show is staged by the students of the College for the purpose of demonstrating showmanship with good sportsmanship. Competitions are open to individual students and to student clubs. More than 150 animals of the herds and flocks of the College will be exhibited. The students are assigned these animals and have one month in which to fit and train them for the Show. Competent judges will place the classes on a strictly showmanship basis. In other words, the placing is made on the ability of the students to prepare the animal for the show ring and his ability to show and exhibit the qualities of the animal. Valuable trophies and other prizes are awarded. In the Gymnasium, student clubs arrange educational exhibits. These are on a strictly educational basis and give opportunity for the display of originality and ability in presenting information relating to various phases of Agriculture and Home Economics. A large number of classes for agricultural products, cooking, sewing and art will also be open to students. Perhaps no project carried out by the students throughout the whole year is of more interest and assistance to both public and the students than is the College Royal. March 4th will be an outstanding day on the O. A.C. Campus. Large numbers of parents and friends of the students will come to inspect the exhibits and to watch the judging in the pavilion. An invitation is also extended to students of High Schools and Collegiate interested in this work. The coveted award of "Grand Champion Showman" brings forth outstanding work by a large number of young men who have had experience with stock and who seek the favorable decision of the judges. The competition this year promises to be keener than that of any other Show.

Wood Versus Coal for Fuel
In localities where there are large areas of woodland within trucking distance the householders in villages and towns could often save money by using wood rather than coal for fuel. They would also help the farmer and their town as the farmer would have a market for a product which otherwise is often unsaleable and the town

merchants would benefit as the farmer would have this extra money to purchase groceries, dry goods, hardware and shoes. Coal has replaced wood as fuel to a large extent in many towns, villages and there are also a large number of farmers who burn coal. Various reasons are responsible for this substitution. In too many sections the farmers and residents of villages have no other alternative as most of the land has been cleared and there is no wood for sale. Many purchase coal rather than wood because they have a much better idea what they are buying. Many have a very hazy idea of the heating value of a cord of wood compared to a ton of coal. Also they realize that different species differ very greatly in heating qualities but the amount of variation is not known. The Forest Products Laboratories have investigated the heating values of different tree species and the results of these investigations are given. The table gives the number of cords of each species that give the same amount of heat as a ton (2,000 lbs.) of good anthracite coal. The heating value of green wood is approximately 5% less than air-seasoned wood.

Heating Values of Wood
(The first column of figures indicates the number of air-dry standard cords required to equal 2,000 lbs. of good anthracite coal.)

Species	Average
Locust, Black	1
Ironwood	1 1-20
Elm, Rock	1 1-10
Hickory, Shagbark	1 1-6
Hickory, Bitternut	1 1-6
Maple, Sugar	1 1-5
Beech	1 1-4
Oak, Red	1 1-4
Birch, Yellow	1 1-3
Ash, White	1 1-3
Elm, White	1 2-5
Birch, White	1 1-2
Cherry, Black	1 1-2
Maple, Red	1 1-2
Ash, Black	1 1-2
Maple, Silver	1 3-5
Maple, Manitoba	1 4-5
Butternut	2
Basswood	2
Poplar (large toothed)	1 9-10
Poplar, Aspen	1 19-20
Poplar, Balsam	2
Poplar, Cottonwood	2
Evergreens	
Tamarac	1 1-2
Pine, Jack	1 3-4
Pine, Red	1 9-10
Spruce, Black	2
Hemlock	2 1-10
Pine, White	2 3-10
Balsam	2 2-5
Spruce, White	2 3-10

Names are listed in order of standing.

A. M. HILL.
SR. III—Betty Watson, Marjorie Roberts, Douglas Parkinson, Lenetta Rainey, Glen Kennedy, Norman Allen, Keith Connell, Helen Penstone, Jean Sanderson, Charles Minton, Rosie Benton, Ralph St. John, Barbara Cooper, Charles Coulson, Bruce Pellatt.

JR. III—Leone Brookfield, Marion Stiver, Doris Coulson, Harold Roberts, Bill Kirke, Gloria Allen, Hazel Norton, Fred St. John, Betty Ogden, Betty Rae, Janet Sabiston, Roy Johnson, Roy Minton, Clara Connell, Russell Allen, Russell Hemingway; Nonnie Rae and Myrtle Latimer (absent).

The London Ontario Board of Education recently voted a salary increase of \$50.00 per year to 174 public and secondary school teachers in that city. The increase applied to lady teachers receiving twelve hundred or less and to men teachers receiving twenty-five hundred or less.

Samuel Mitchell, well known Bramp ton resident for many years, died recently in his 63rd year. The late Mr. Mitchell was one of the pioneer automobile dealers of Peel County and distributed a great many of the early McLaughlin models.
