Warning to Farmers Re Seed Grain

In another column in this paper will be found an advertisement by the Department of Agriculture calling attention to the danger of farmers using seed without having germination tests made of it. A careful perusal of this advertisement may be of very great value to many of our farmers. We know that most farmers are particular about sowing good seed free from weed seeds and with a high germination test but sometimes these matters are left off until it is too near sowing time to have these tests properly made, and so this advertisement will just call their attention to the necessity of having this work done in good time before seeding begins.
